

**Model Number**

**RMS-G-RC**

Radarsensor

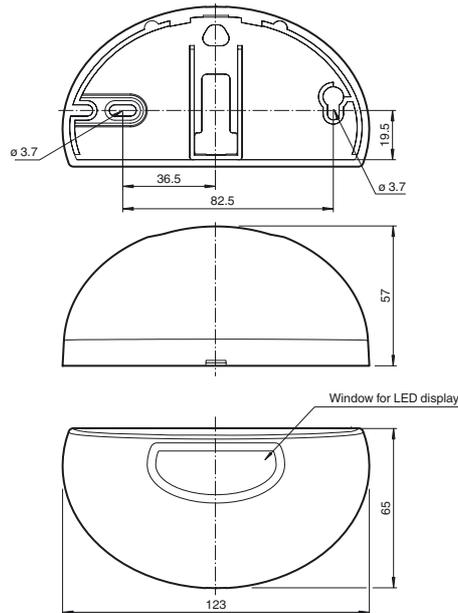

**Features**

- Industrial gate opener with the ability to differentiate between people and vehicles
- Extra-wide detection area and long detection range
- Direction detection
- Easily programmable
- Programmable by remote control

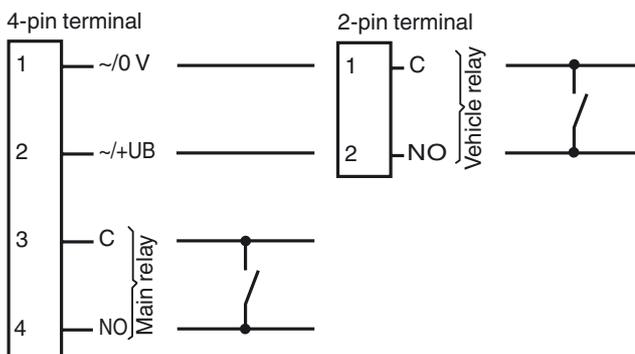

**Product information**

The microprocessor-controlled microwave motion sensors based on the latest 24 GHz technology provide a high degree of reliability even in difficult operating conditions and can be used with all automatic (industrial) doors up to a height of 7 m. The RMS-G sensors are equipped with intelligent functions, such as vehicle detection, to enable them to be used in a wide variety of applications. The special industrial door microwave sensor can be configured so that the industrial door only opens when a vehicle approaches it, while passing pedestrians are ignored. The sensor differentiates between people and vehicles.

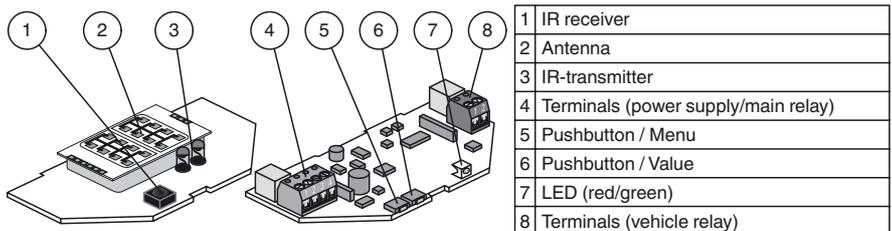

**Dimensions**

**Electrical connection**

**Indicators/operating means**

Release date: 2019-12-18 11:33 Date of issue: 2019-12-18 184852\_eng.xml

**Technical data**

**General specifications**

Sensing range	7000 x 6000 mm (DxW) at 5000 mm mounting height and 30° tilt angle 8000 x 5000 mm (DxW) at 7000 mm mounting height and 30° tilt angle
Function principle	Microwave module
Detection speed	min. 0.1 m/s , max. ... 5 m/s (18 km/h)
Setting angle	0 ... 40 ° in 5 ° increments
Operating frequency	24.15 ... 24.25 GHz K-Band
Operating mode	Radar motion sensor
Transmitter radiated power (EIRP)	< 20 dBm

**Functional safety related parameters**

MTTF <sub>d</sub>	620 a
Mission Time (T <sub>M</sub> )	20 a
Diagnostic Coverage (DC)	0 %

**Indicators/operating means**

Function indicator	LED red/green
Control elements	Programming push-button for selection of operating modes : Direction detection , Cross traffic suppression , Vehicle detection , Switching type
Control elements	Adjustment for off delay
Control elements	Programming via 2 keys , alternative via remote control (Accessories ordered separately)

**Electrical specifications**

Operating voltage	U <sub>B</sub>	12 ... 36 V DC , 12 ... 28 V AC
No-load supply current	I <sub>0</sub>	≤ 50 mA at 24 V DC
Power consumption	P <sub>0</sub>	≤ 1 W

**Output**

Switching type	NO/NC	
Signal output	2 relay outputs	
Switching voltage	max. 48 V AC / 48 V DC	
Switching current	max. 0.5 A AC / 1 A DC	
Switching power	max. 24 W / 60 VA	
De-energized delay	t <sub>off</sub>	0.2 ... 5 s adjustable

**Ambient conditions**

Operating temperature	-20 ... 60 °C (-4 ... 140 °F)
Storage temperature	-30 ... 70 °C (-22 ... 158 °F)
Relative humidity	max. 90 % non-condensing

**Mechanical specifications**

Mounting height	max. 7000 mm
Degree of protection	IP54
Connection	plug-in screw terminals 4-pin and 2 pin , 8 m connecting cable included with delivery
Material	
Housing	ABS, anthracite
Mass	120 g
Dimensions	123 mm x 65 mm x 57 mm

**Suitable series**

Series	RMS
--------	-----

**Approvals and certificates**

CE conformity	2014/53/EU This device can be used in all countries within the European Union. In other countries, all applicable national regulations must be observed.
EAC conformity	TR CU 020/2011
FCC approval	No - Use in North America is not permitted.

**Functional Principle**

Radar sensors are microwave sensors that adopt the principle of Doppler radar. The most important requirement for radar detection is that the object to be detected is moving. The radar sensors emit microwaves of a defined frequency in order to detect people and large objects moving within the specified velocity range of the radar sensor.

The microwaves emitted by the emitter are reflected back from the ground or other surfaces to the receiver. If there is no motion in the monitored zone, the emitted and reflected frequencies are identical. Nothing is detected. If people, animals or objects are moving in the monitored zone, the reflected frequency changes and therefore triggers a detection.

Based on the latest 24 GHz technology with integrated microprocessor control, these sensors provide a high level of reliability, even in difficult operational conditions. The 24 GHz frequency, known as 'K-band,' is reserved by CETECOM for this application area all round the world.

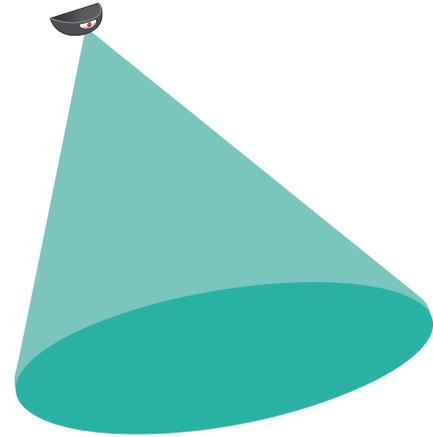

The RMS-G series of sensors are equipped with intelligent functions to enable them to be used in a wide variety of applications. The cross-traffic suppression system can be configured so that the door only opens when vehicles or people approach it, while passing pedestrians are ignored.

With direction detection, the opening impulse can be triggered based on the direction of

**Typical applications**

- Opening impulse sensor for industrial doors
- Motion sensor for people and objects
- Activation sensors for detecting vehicles traveling at a maximum of 60 km/h (RMS-G-RC-HS)

**Detection area**

**Accessories**

**RMS Weather Cap**

All-weather hood for RMS series microwave sensors, for ceiling and wall installation

**RMS Remote Control**

Infrared remote control for RMS series and RAVE

**RMS Antenna broad**

Radar antenna for wide sensing range

**RMS/RaDec Ceiling Kit wh**

Ceiling mount kit for radar sensors in the RMS and RaDec Series

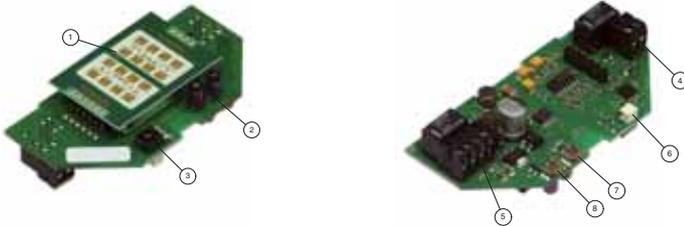

Other suitable accessories can be found at [www.pepperl-fuchs.com](http://www.pepperl-fuchs.com)

motion. Depending on the setting, only movements towards or away from the sensor are detected.

**settings**

The RMS-G-RC sensor is adjusted in programming mode directly on the device using two buttons: --> 8 = pushbutton/menu; 7 = button/value. The flashing sequence of the LEDs indicates the settings. With the RMS remote control, available as an accessory, the sensor can be easily and quickly programmed from the ground. The bidirectional infrared remote control with an LCD display and self-explanatory menu interface has a range of 10 m. Even sensors with considerable installation heights can be precisely and easily adjusted.

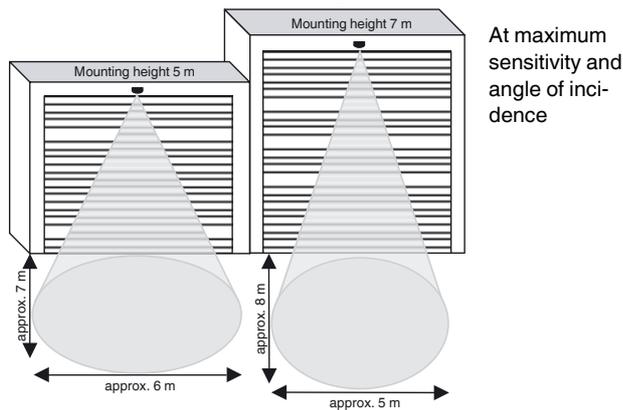

**Model number for remote control: RMS remote control**

- 1) Antenna
- 2) IR emitter diode
- 3) IR receiver diode
- 4) Screw terminal (vehicle relay)
- 5) Screw terminal (voltage/main relay)
- 6) LED indicator
- 7) Button/value
- 8) Button/menu

**The following properties are adjustable:**

**1. Dimensions of the sensing area**

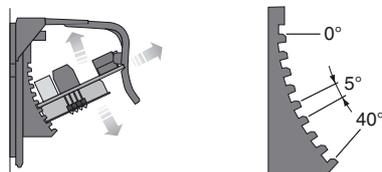

**2. Dimensions of the sensing area**

The size of the sensing area can be changed by adjusting the sensitivity using the buttons or remote control.

**3. Position of the sensing area:**

The sensing area can be rotated in 5° increments from 0° to 40°. The printed circuit board can also be inserted at an angle.

**4. Detection without direction detection**

Release date: 2019-12-18 11:33 Date of issue: 2019-12-18 184852\_eng.xml

Forward/backward

**5. Detection with direction detection**

Forward (towards the sensor)

Backward (away from the sensor)

**6. Cross-traffic suppression**

Without suppression: door opens even in the event of cross-traffic

With suppression: door remains closed in the event of cross-traffic

**7. Detection of people/vehicles**

The sensor evaluates movements of people and vehicles in different ways and switches the main relay or both relays at the same time according to the setting.

The distinguishing between people/vehicles makes it possible to only open the door for vehicles. Approaching people must use the side entry.

**8. Relay functions**

The main relay always switches if it detects both people and vehicles.

The vehicle relay only switches if vehicle detection is switched on and if a vehicle is detected and there is no pedestrian traffic.

**Function display**

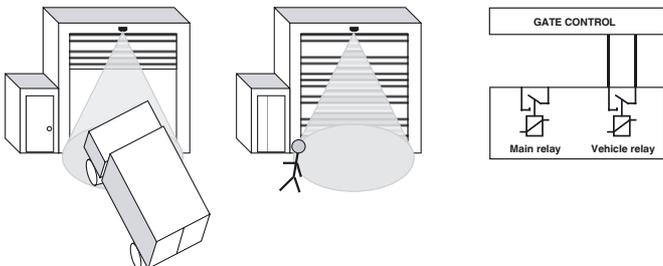

<b>LED green</b>	Device ready for operation
<b>LED red</b>	Main relay is activated
<b>LED quickly flashes green/red</b>	Vehicle relay is activated
<b>LED flashes green/red slowly</b>	Initialization (for approx. 10 sec after switching on)
<b>LED flashes green</b>	Command received
<b>LED flashes red</b>	Fault

**Application examples:  
Distinguishes between people and vehicles**

**Door with separate entry for people, door controller with 1 entry, vehicle detection switched on, only vehicle relay connected**

The size of the sensing area can be changed by adjusting the sensitivity using the buttons or remote control.

Vehicle approaching	Person approaching
Vehicle relay switches (LED quickly flashes red/green)	Vehicle relay does not switch, door remains closed
The door opens	Person uses side entrance

**Door with no separate entry for people, door controller with two entries, vehicle detection switched on, main relay and vehicle relay connected**

Release date: 2019-12-18 11:33 Date of issue: 2019-12-18 184852\_eng.xml

Person approaching

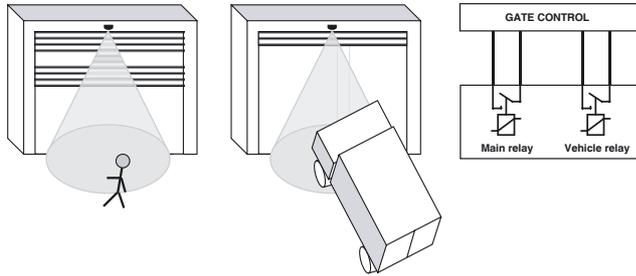

Vehicle approaching

Main relay switches (LED lights up red)

Main relay and vehicle relay switch (LED quickly flashes green/red)

The door opens half-way

Door opens fully
