- No controls
- Very bright, highly visible light spot
- Full metal thread mounting

Retroreflective sensor with polarization filter

Function

The ML100 series is characterized by its miniature housing with integral, all-metal threaded bushings. All versions are equipped with a visible red transmitter LED. This greatly simplifies installation and commissioning. The switching states are easily visible from all directions thanks to the highly visible LEDs.

With the additional health output (stability alarm), an insufficient operating reserve of the sensor is indicated and can be used for predictive maintenance. That saves costs and time.
