Receiver

# **Electrical connection**

**Dimensions** 

# **Model Number**

# OBE10M-R2-SE2-0,2M-V3-L Laser thru-beam sensor

with 0.2 m fixed cable and M8 connector, 3pin

## **Features**

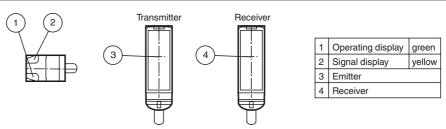

- · Ultra-small housing design
- DuraBeam Laser Sensors - durable and employable like an LED
- 45° cable outlet for maximum mounting freedom under extremely tight space constraints
- Improvement in machine availability • with abrasion-resistant, antistatic glass front

# **Product information**

The R2 series nano sensor has been developed for a broad range of applications. It offers excellent durability and is exceptionally easy to install. The housing is compact and, with its  $45^{\circ}$  cable outlet, can be installed in the smallest spaces. New functional principles and functionality open up a range of new options. The DuraBeam laser sensors are durable and can be used in the same way as a standard sensor. The abrasion-resistant lens allows long operating times close to the moving object.

## **Curves/Diagrams**

## **Teach-In Methods**

The thru-beam sensor enables the switching points to be taught in for optimum adaptation to specific applications. This eliminates the need for additional components such as apertures.

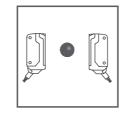

The sensitivity of the thru-beam sensor can be adjusted using three Teach-in methods:

### Position Teach

When using this Teach-in method, the following settings are made on the thru-beam sensor:

- The gain is set to an optimum value
- The signal threshold is set to a minimum

#### Recommended application:

This method enables minuscule particles in the beam path to be detected, and provides exceptional positioning accuracy. Make sure that there are no objects in the beam path and that the sensor is connected to the power supply.

- 1. Connect the white cable on the receiver (WH/IN) to the blue cable (BU/0 V) on the receiver.
- The green and yellow LED indicators flash simultaneously at 2.5 Hz
- 2. Disconnect the white cable on the receiver (WH/IN) from the blue cable (BU/0 V) on the receiver. The green and yellow LED indicators flash alternately at 2.5 Hz
- 3. The end of the Teach-in process is indicated when the green LED indicator lights up static and yellow LED blinks.

### Two-Point Teach-In

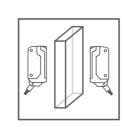

When using this Teach-in method, the following settings are made on the thru-beam sensor:

- · The gain is set to an optimum value
- The signal threshold is set in the center between the two taught signal values

<sup>5</sup> PEPPERL+FUCHS

3

Signal s	trength	
Max. –		
	Teach-in value 1 (avg)	l
	Threshold level	<ul> <li>Contrast levels</li> </ul>
	Teach-in value 2 (avg)	ļ

- 1. Make sure that there are no objects in the beam path and that the sensor is connected to the power supply.
- Connect the white cable on the receiver (WH/IN) to the blue cable (BU/0 V) on the receiver. The green and yellow LED indicators flash simultaneously at 2.5 Hz
- 3. Position the object in the beam path.
- Disconnect the white cable on the receiver (WH/IN) from the blue cable (BU/0 V) on the receiver. The green and yellow LED indicators flash alternately at 2.5 Hz
- 5. The end of the Teach-in process is indicated when the green LED indicator lights up static.

#### Maximum Teach-In

When using this Teach-in method, the following settings are made on the thru-beam sensor:

- The gain is set to a maximum
- · The signal threshold is set to a minimum

Signal strength			_
Max			
	Threshold level		ľ
o 🗕 🗕		<b></b>	L

#### Recommended application:

Enables an object to be detected with a high excess gain. This can be useful if there is severe environmental contamination or to achieve long operating times.

Make sure that there are no objects in the beam path and that the sensor is connected to the power supply.

- 6. Cover the receiver or transmitter.
- 7. Connect the white cable on the receiver (WH/IN) to the blue cable (BU/0 V) on the receiver. The green and yellow LED indicators flash simultaneously at 2.5 Hz
- 8. Disconnect the white cable on the receiver (WH/IN) from the blue cable (BU/0 V) on the receiver. The green and yellow LED indicators flash alternately at 2.5 Hz
- 9. The end of the Teach-in process is indicated when the green LED indicator lights up static.

## Laser notice laser class 1

- The irradiation can lead to irritation especially in a dark environment. Do not point at people!
- Maintenance and repairs should only be carried out by authorized service personnel!
- Attach the device so that the warning is clearly visible and readable.
- The warning accompanies the device and should be attached in immediate proximity to the device.
- Caution Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.
