This document is the original instructions.

Licences and trademarks

All trademarks and company names used are subject to the copyright of the respective companies.

1 Preliminary note

This document applies to devices of the type "ecomatController" (art. no.: M30720/M30721).

It is part of the device.

This document is intended for specialists. These specialists are people who are qualified by their appropriate training and their experience to see risks and to avoid possible hazards that may be caused during operation or maintenance of the device. The document contains information about the correct handling of the device.

Read this document before use to familiarise yourself with operating conditions, installation and operation. Keep this document during the entire duration of use of the device.

Adhere to the safety instructions.

Technical data, approvals, accessories and further information at www.ifm.com.

1.1 Explanation of symbols

- ▶ Instruction
- > Reaction, result
- [...] Designation of keys, buttons or indications
- Cross-reference
-  Important note
Non-compliance may result in malfunction or interference.
-  Information
Supplementary note

⚠ WARNING

Warning of serious personal injury.
Death or serious irreversible injuries may result.

⚠ CAUTION

Warning of personal injury.
Slight reversible injuries may result.

NOTE

Warning of damage to property.

2 Safety instructions

2.1 General

These instructions are an integral part of the device. They contain texts and figures concerning the correct handling of the device and must be read before installation or use.

Observe the operating instructions. Non-observance of the instructions, operation which is not in accordance with use as prescribed below, wrong installation or incorrect handling can seriously affect the safety of operators and machinery.

UK

2.2 Target group

These instructions are intended for authorised persons according to the EMC and low-voltage directives. The unit must be installed, connected and put into operation by a qualified electrician trained in safety technology.

2.3 Electrical connection

The device is designed for supply via a mobile on-board system (12/24 V DC battery operation).

Disconnect the unit externally before handling it. If necessary, also disconnect any independently supplied output load circuits.

If the device is not supplied by the mobile on-board system (12/24 V battery operation), it must be ensured that the external voltage is generated and supplied according to the criteria for safety extra-low voltage (SELV) as this voltage is supplied without further measures to the connected controller, the sensors and the actuators.

The wiring of all signals in connection with the SELV circuit of the device must also comply with the SELV criteria (safety extra-low voltage, safe electrical isolation from other electric circuits).

If the supplied SELV voltage is externally grounded (SELV becomes PELV), the responsibility lies with the user and the respective national installation regulations must be complied with. All statements in this document refer to the device the SELV voltage of which is not grounded.

The connection terminals may only be supplied with the signals indicated in the technical data and/or on the device label and only the approved accessories from ifm electronic gmbh may be connected.

2.4 Housing temperature

As described in the technical specifications below the device can be operated in a wide ambient temperature range. Because of the additional internal heating the housing walls can have high perceptible temperatures when touched in hot environments.

2.5 Tampering with the device

In case of malfunctions or uncertainties please contact the manufacturer. Any tampering with the device can seriously affect the safety of operators and machinery. This is not permitted and leads to the exclusion of any liability and warranty claims.

2.6 Electromagnetic compatibility

This is a class A product. It can cause radio interference in domestic areas. In this case the operator is requested to take appropriate measures.

2.7 Electrical welding on vehicles and plants

Welding work on the chassis frame must only be carried out by qualified persons.

Remove and cover the plus and minus terminals of the batteries.

Disconnect all contacts of the controller from the on-board system prior to welding on the vehicle or plant. Connect the earth terminal of the welding device directly to the part to be welded.

Do not touch the controller or electric cables with the welding electrode or the earth terminal of the welding device.

Protect the controller against weld slag.

3 Functions and features

The freely programmable controllers of the "ecomatController" series are rated for use under difficult conditions (e.g. extended temperature range, strong vibration, intensive EMC interference).

► Observe the operating conditions.

⚠ WARNING

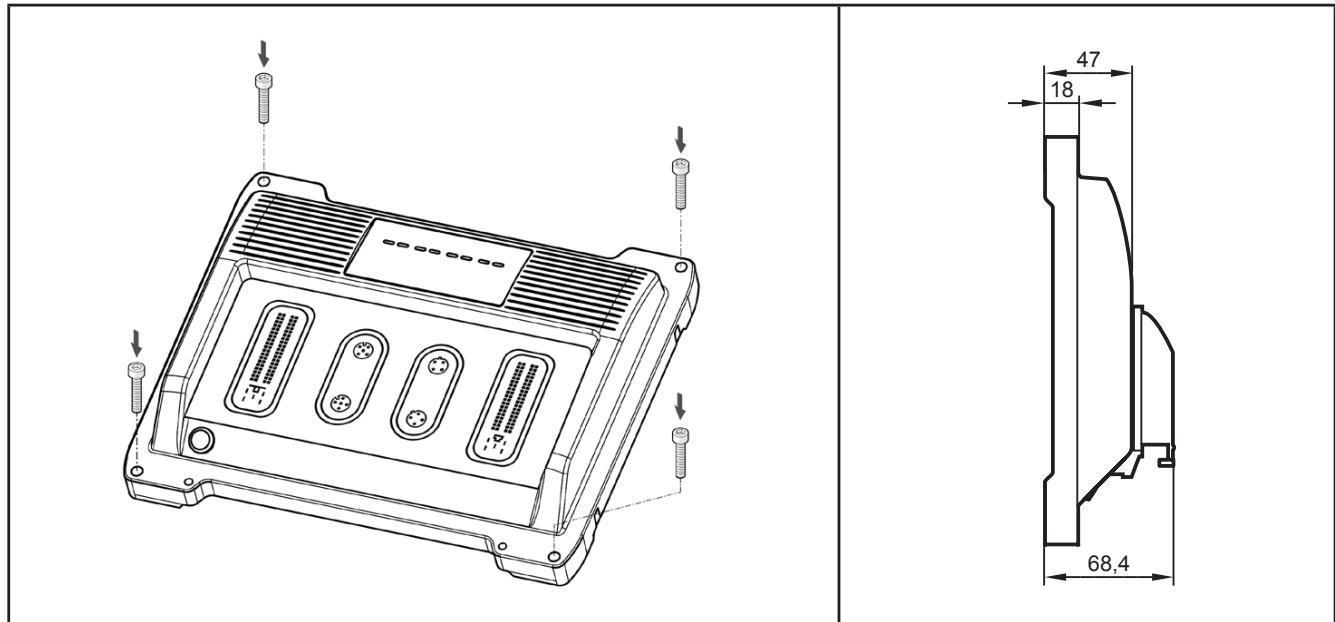

- Functions and features
- Programming and important additions to these instructions
- Set-up

4 Installation

4.1 Fastening

► Fix the controller to a flat surface using 4 galvanized M6 screws.

Tightening torque: $10^{\pm 2}$ Nm

Installation

Total height with the attached connector.

NOTE

To avoid contact corrosion between the mounting screws and the module housing, do not use any stainless steel screws or nickel-plated screws.

In very corrosive environments such as extremely salty air, we recommend to use screws with surface finishing on a zinc/nickel basis with thick-film passivation and sealing. For normal corrosive requirements zinc-plated screws are sufficient.

UK

4.2 Installation position

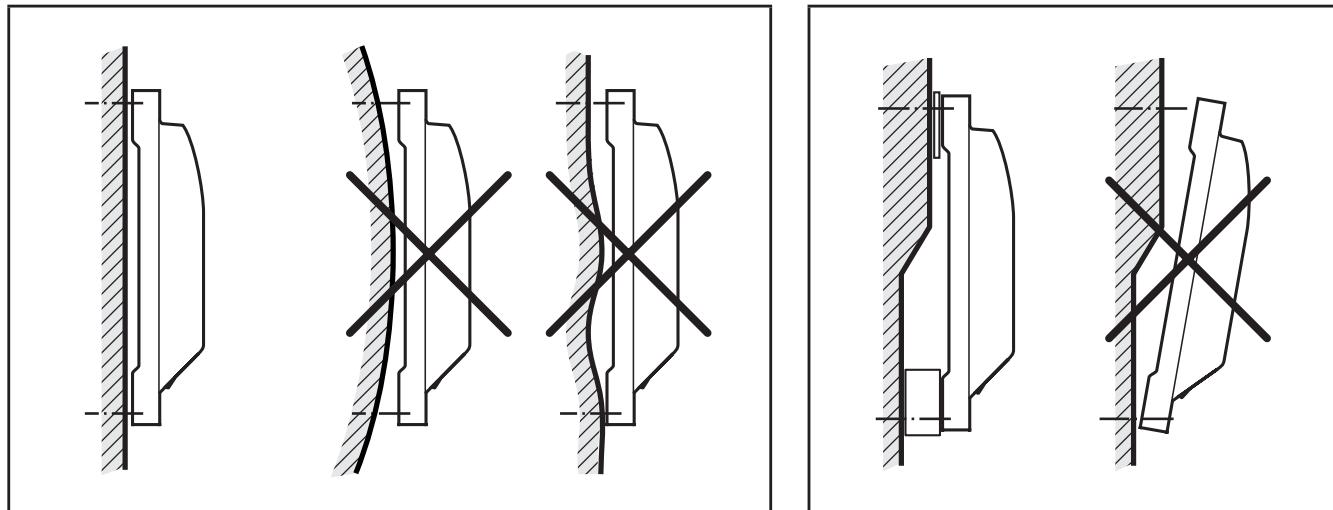

In wet environments, install the controller ensuring that no liquid remains on the connectors.

4.3 Mounting surface

NOTE

The housing must not be exposed to any torsional forces or mechanical stress.

- Use compensating elements if there is no flat mounting surface available.

Mounting surface

- During installation, ensure that the pollution degree is 2 or better. Pollution degree 2 is a light, common contamination which can be caused by occasional thawing or hand perspiration (DIN EN 60664-1).

4.4 Heat dissipation

- Ensure sufficient heat dissipation as the internal heating of the electronics is conducted away via the housing. The heat dissipation mainly takes place via the bottom of the housing. The housing is built in such a way that, when mounted on a flat surface, the heat can be dissipated through the bottom.

5 Electrical connection

5.1 Wiring

Wiring (→ 7 Technical data)

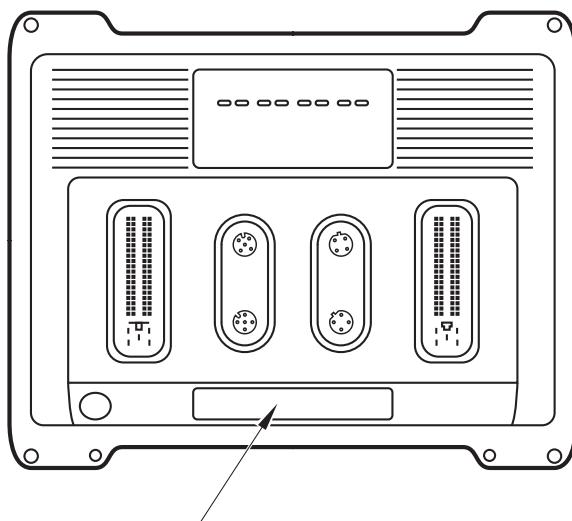

! Only connect the connector pins as shown in the pin layout.
Unspecified connector pins remain unconnected.

- Connect all indicated supply cables and GND terminals.

5.1.1 Assignment of the connectors

- Note the device label.

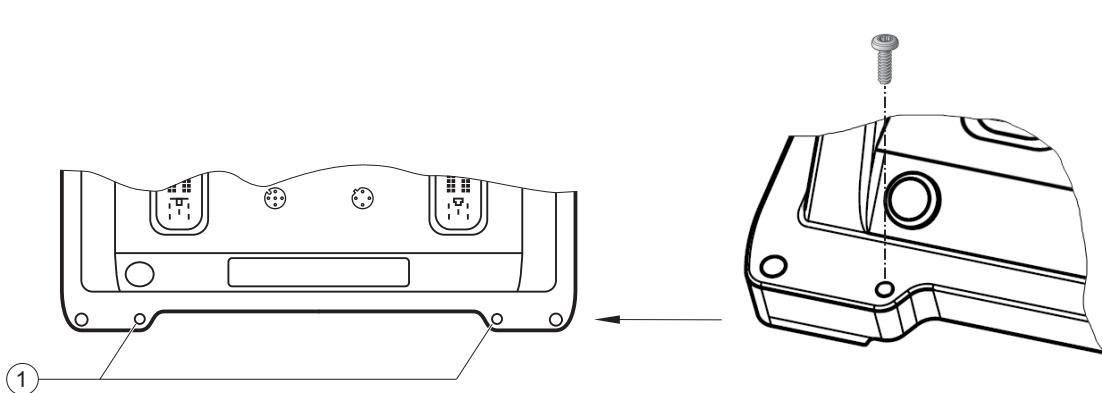

UK

Assignment of the connectors on the device label

- Use the M12 connector with gold-plated contacts.
- Unused sockets are equipped with protective caps (included).
- For protection rating IP 67, use a device with individually sealed cores.

5.2 Shield connection

1: Holes for shield connection

! To ensure the protection of the device against electrical interference and the safe function of the device, the housing must be connected to the ground / body of the vehicle in the shortest possible way.

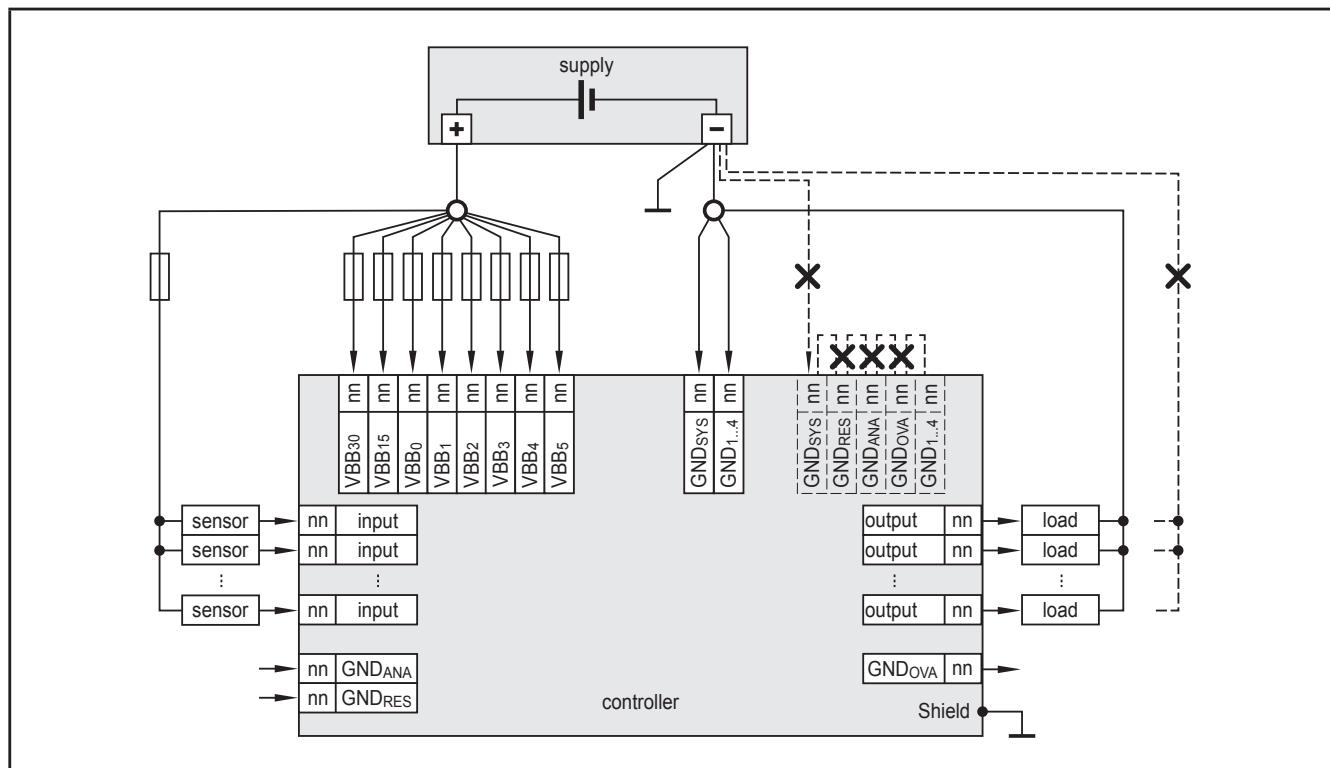

- Connect the device to the ground of the vehicle using the M4 self-tapping screw (included).

5.3 Fuses

- The individual electric circuits must be protected in order to protect the whole system.

Connector	Designation	Potential	Pin no.	Fuse
Connector A	Supply voltage sensors/module	VBB ₃₀	30	≤ 2 A time-lag
	Supply voltage sensors/module	VBB ₁₅	15	≤ 2 A time-lag
	Supply voltage output group 0	VBB ₀	04	≤ 15 A
	Supply voltage output group 1	VBB ₁	03	≤ 15 A
	Supply voltage output group 2	VBB ₂	01	≤ 15 A
Connector B	Supply voltage output group 3	VBB ₃	04	≤ 15 A
	Supply voltage output group 4	VBB ₄	03	≤ 15 A
	Supply voltage output group 5	VBB ₅	01	≤ 15 A

5.4 Laying the supply and signal cables

Connection of the supply and signal cables (X = not permitted), example M30721

⚠ WARNING

The linking of connections in the plug is not permitted and can affect the safety of operators and machinery.

- ▶ Basically all supply and signal cables must be laid separately.
- ▶ Connect supply and ground cables to the controller and the sensors/actuators via the respective common star point.

- !** If a prewired connection cable is used, remove the cores with unused signal inputs and outputs.

Unused cores, in particular core loops, lead to interference coupling that can influence the connected controller.

In case of signal failures, operate inputs with shielded cables. Connect the shields to the shield connection on one side.

VBB_0 must be connected in order to protect the controller against load dump

⚠ WARNING

If VBB_0 is not connected, this can affect the safety of operators and machinery.

UK

Abbreviation	Input / output type
A	Analogue
B_H	Binary high side (CSO)
B_L	Binary low side (CSI)
$FRQ_{L/H}$	Frequency/pulse inputs configurable low side (CSI) / high side (CSO)
PWM_H	Pulse width modulation high side (CSO)
PWM_L	Pulse width modulation low side (CSI)
PWM_I	Pulse width modulation current-controlled
R	Resistor input

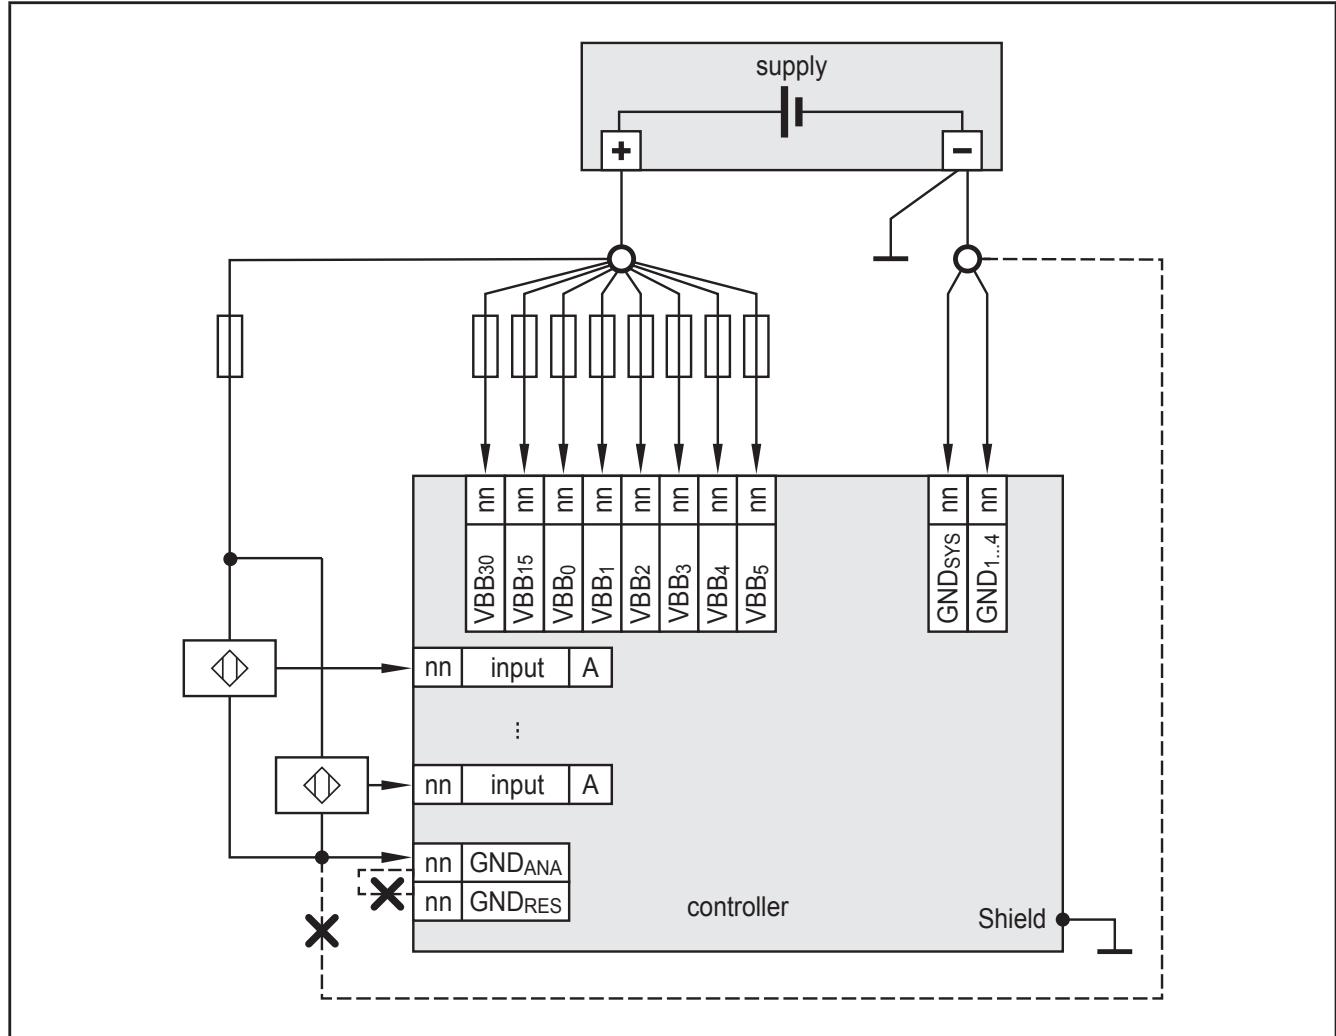

5.4.1 GND connections

- ▶ Connect the $GND_{1\dots 4}$ and GND_{SYS} connectors individually to the common GND star point.
- ▶ Connect the shield connection of the housing to the ground / body of the vehicle in the shortest possible way.

⚠ WARNING

Do not connect the GND_{ANA} , GND_{RES} and GND_{OVA} connectors to the common GND star point, but to the GND of the signal source or of the connected device.

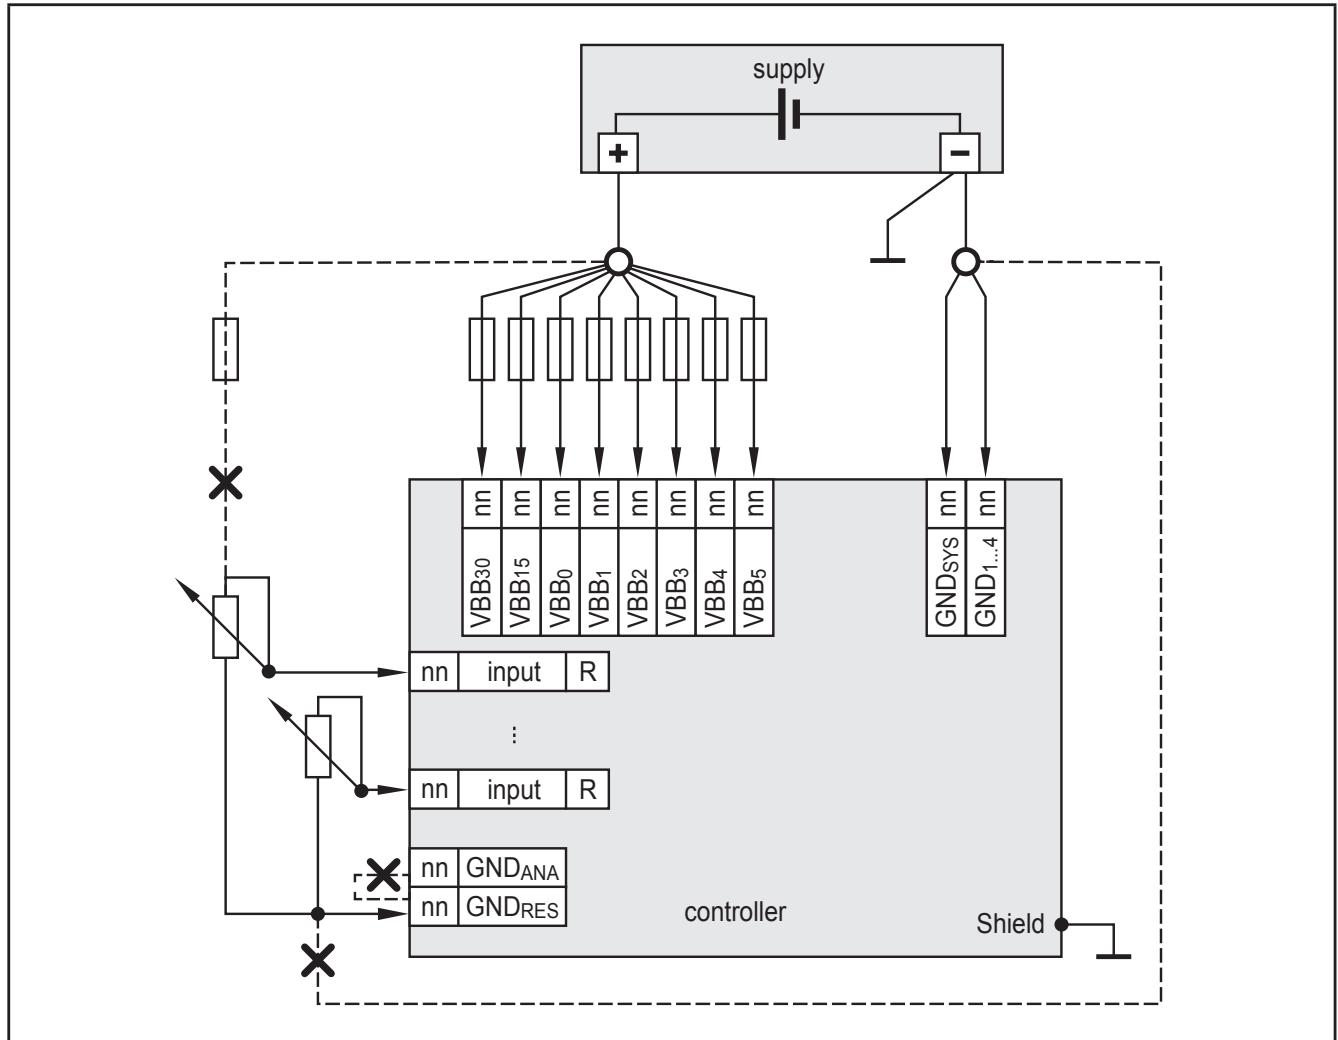

5.5 Analogue inputs

Connection of the analogue inputs (A)

- Connect GND_{ANA} to the GND of the signal source.
Do not connect GND_{ANA} to other GND connectors or to the GND star point.

5.6 Resistor inputs

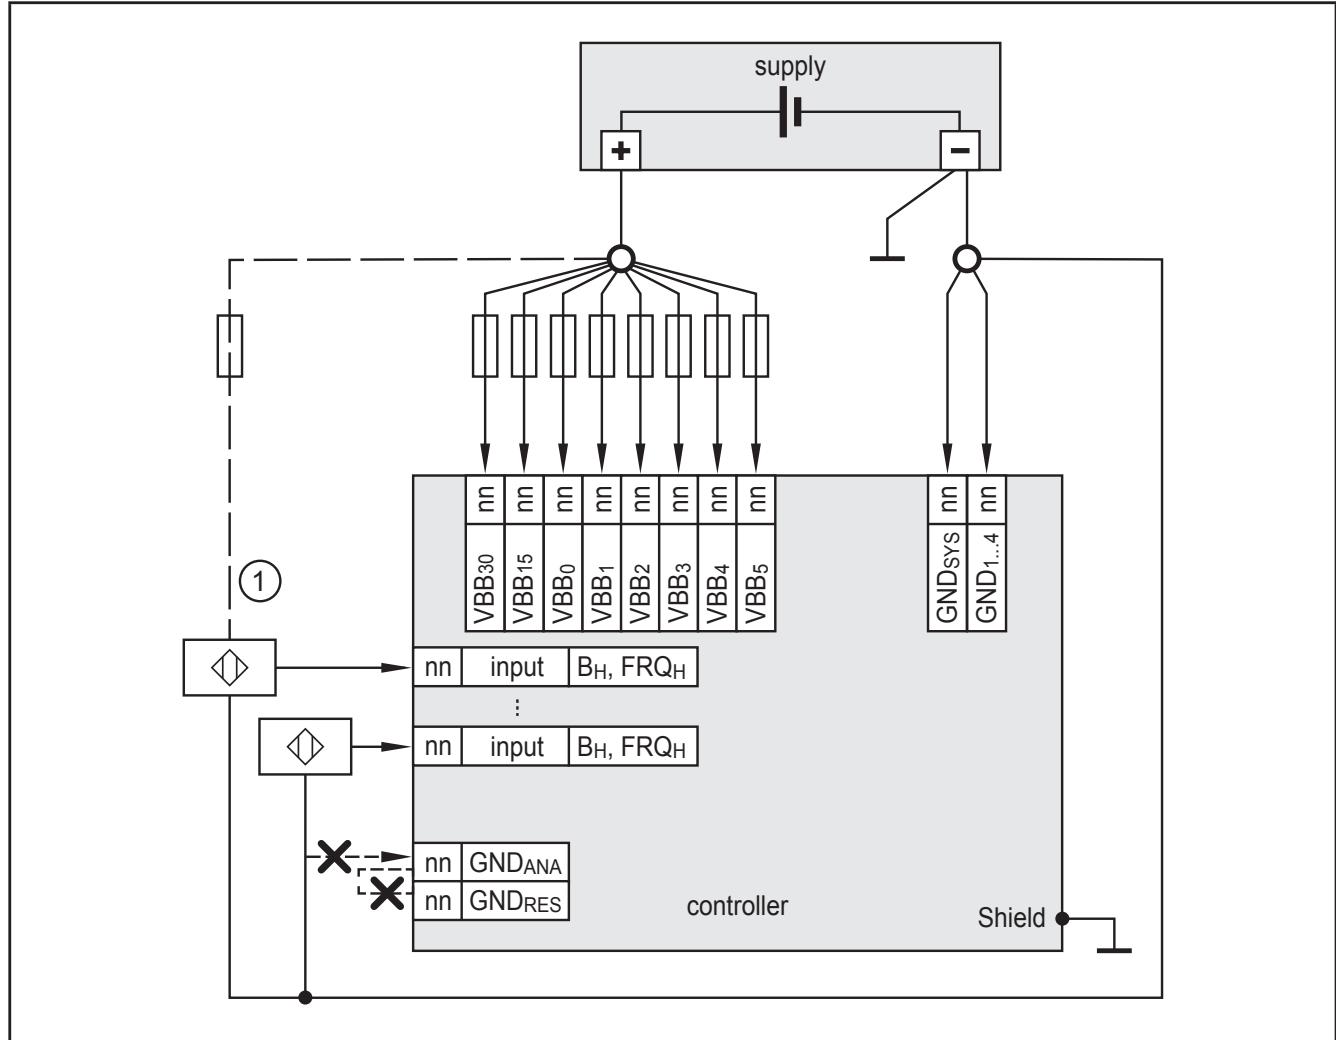

Connection of the resistor inputs (R)

- Connect GND_{RES} to the GND of the signal source.
Do not connect GND_{RES} to other GND connectors or to the GND star point.

UK

5.7 High side digital inputs (CSO)

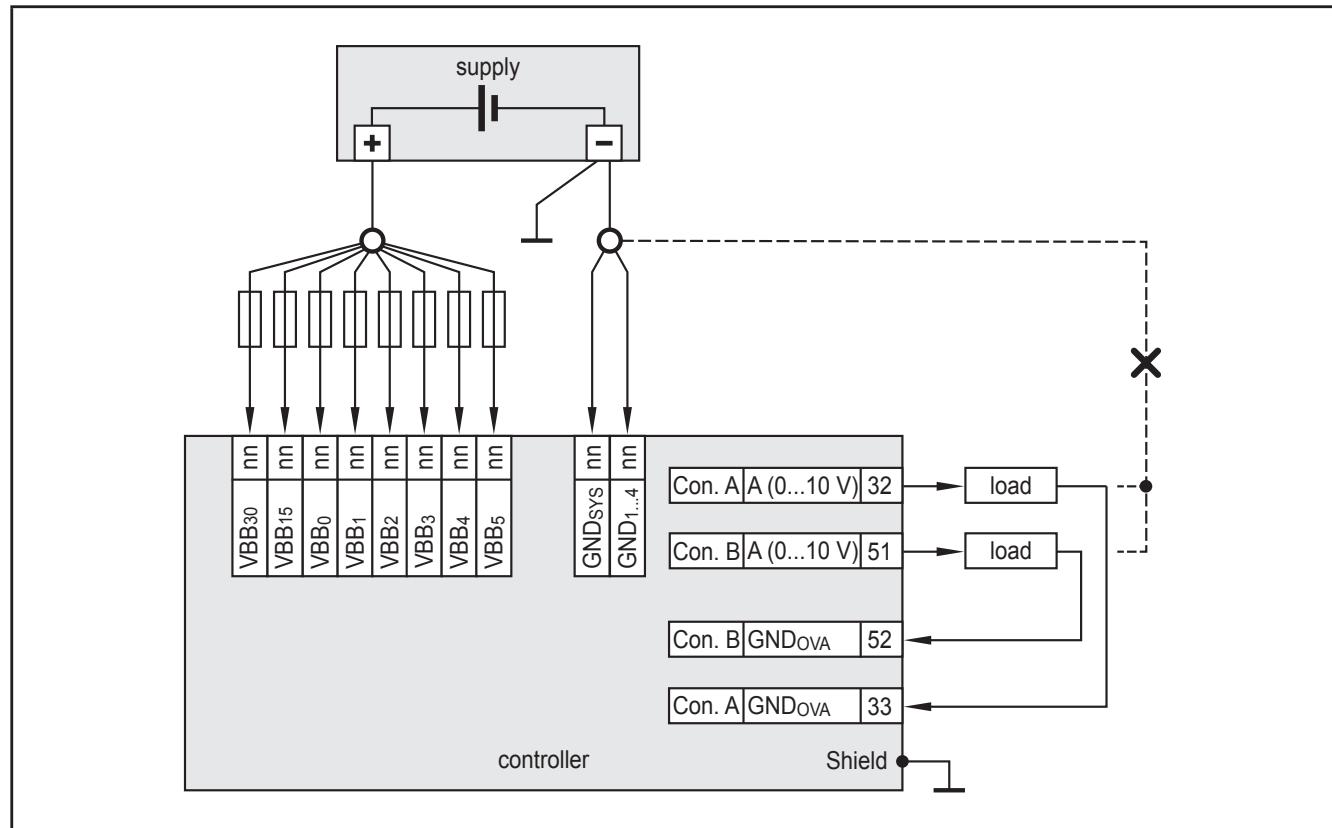

Connection of the high side inputs (B_H, FRQ_H)

1: Connection for 3-wire sensors

- Connect the GND of the signal source with the common GND star point. Do not connect the GND of the signal source to GND_{RES} or GND_{ANA}.

5.8 Analogue outputs

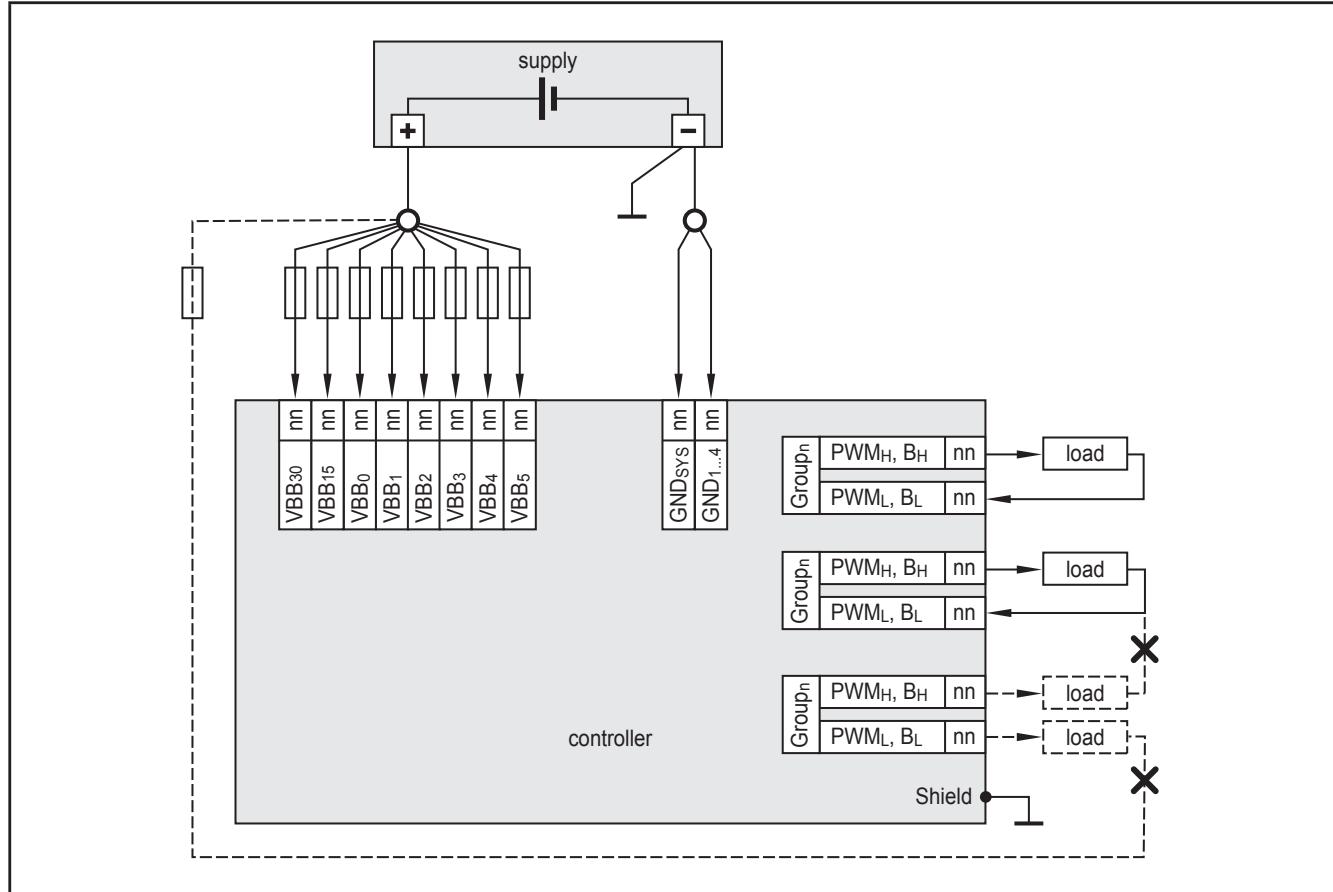

Connection of the analogue outputs (A)

- Connect the GND of the load to GND_{OVA} .
Do not connect the GND of the load to other GND connections or to the common GND star point.

UK

5.9 Low side digital outputs (CSI) / H-bridge

Connection of the low side digital outputs (PWM_L , B_L)

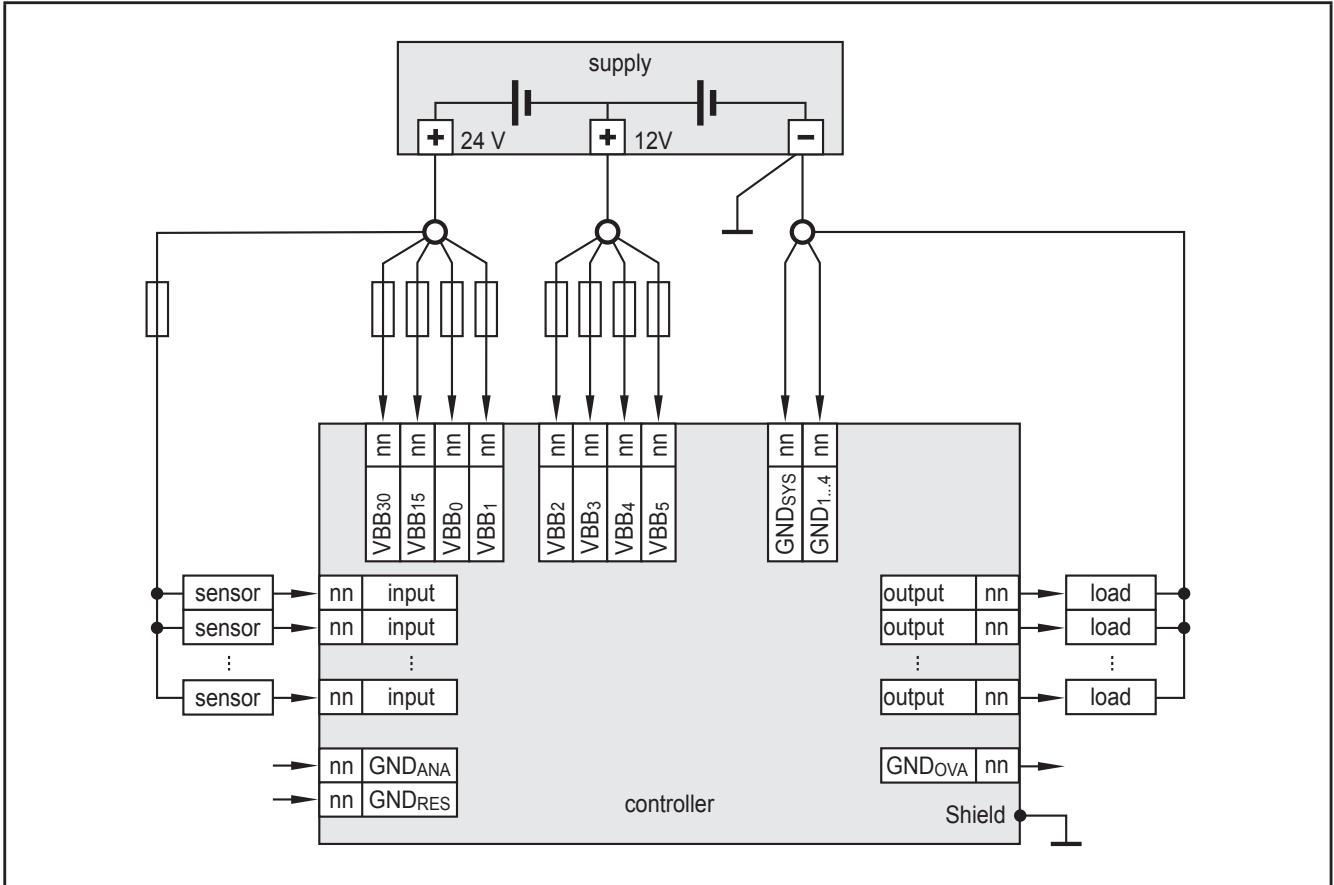

- Supply low-side outputs (B_L) via a high side output (B_H) of the same output group.

⚠ WARNING

Impermissible connection configurations of the low side outputs can affect the safety of operators and machinery.

5.10 Mixed operation (12 V / 24 V)

UK

Example connection to 24 V and 12 V power supply combined

The operation of the output groups is possible with different supply voltages.

- VBB₀, VBB₃₀ and VBB₁₅ must be connected at the common star point.

5.11 Connection technology

NOTE

Only connect the 81-pole connectors when the supply voltage is disconnected.
"Hot plugging" is not permitted.

- Use twisted-pair cables for the CAN connection.
- Use a min. category 5 (Cat 5) cable for the Ethernet connection.

The RS-232 interface serves only as a service interface (e.g. for firmware updates).

6 Set-up

⚠ WARNING

Note the following:

- Functions and features
- Programming and important additions to these instructions
- Set-up

6.1 Interfaces and system requirements

The programmer creates the application program with the IEC 61131-3 compliant programming system CODESYS and loads the applications via the Ethernet, RS-232 or CAN interface to the controller.

 System requirement for CODESYS 3.5 SP10:
Microsoft Windows 7, SP1 or higher

For applicable CODESYS versions see the ecomatController M30720 / M30721 system manual.

6.2 General

As delivered, the device is prepared for programming with CODESYS version 3.5 SP10 or higher.

Factory settings:

IP address: 192.168.82.247
Subnet mask: 255.255.255.0

 The user is responsible for the safe function of the application programs which he created himself. If necessary, he must also obtain an approval from the supervisory and test organisations according to the national regulations.

6.3 Getting started

- ▶ Check if the pre-installed, latest version of the ifm operating system is required.
If necessary, download and install a different version via TFTP.
- ▶ Connect the device to the notebook/PC via the Ethernet interface.
- ▶ Switch on the notebook/PC; Check the IP settings of the notebook/PC and change them if necessary.

Internet protocol: TCP/IP

IP address: 192.168.82.xxx (except for .247, s.a.)

Subnet mask: 255.255.255.0

Gateway IP address: 192.168.82.21

- ▶ Switch on the operating voltage of the device.
- > After the operating voltage has been applied, a project can be loaded.

6.4 Required documentation

In addition to the CODESYS programming system, the following documents are required for programming and set-up of the device:

- Programming manual CODESYS V3.5
(alternatively as online help)

The manuals can be downloaded from the internet:

www.ifm.com → Search → Art. no. → Documents & downloads

CODESYS online help:

www.ifm.com → Service → Download → Control systems*

*) Download area with registration

7 Technical data

7.1 M30720

7.1.1 Mechanical and electric data

M30720	
ecomatController/98	
32-bit CPU TriCore processor	
98 inputs/outputs	
4 CAN interfaces	
Ethernet interface	
CODESYS 3.5	
8...32 V ---	
Technical data	Controller as black box system for the implementation of a central or decentralised system design
Mechanical data	
Housing	closed, screened metal housing with screw connection
Dimensions (H x W x D)	219 x 271 x 47 mm
Mounting	screw connection by means of 4 M6
Connection	2 x connector 81-pole, locked, mechanical reverse polarity protection, type Tyco / AMP contacts AMP-Junior-Timer, crimp connection 0.5/0.75/2.5 mm ² 2 x M12 connector 4 poles, D-coded 2 x M12 connector 5 poles, A-coded Shield connection Ø 4 mm for self-tapping screw
Weight	1.6 kg
Housing/storage temperature	-40...85 °C (depending on the load) / -40...85 °C
Max. perm. relative humidity	90 % (not condensing)
Height above sea level	max. 3000 m
Protection rating	IP 65 / IP 67 (for inserted connectors with individually sealed cores and inserted M12 connectors/sealing caps)
Electrical data	
Input/output channels total	98 (60 inputs / 38 outputs)
Inputs	configurable, with diagnostic capability 24 x A (0...10/32 V, 0...20 mA, ratiometric) / B _L 16 x FRQ _{L/H} (≤ 30 kHz) / B _{L/H} 4 x R (0.016...30 kOhm) / B _L 8 x B _L (impedance ≤ 10 kOhm) 8 x B _L (impedance ≤ 3.2 kOhm)
Outputs	configurable, with diagnostic capability 8 x PWM _{H/L} / PWM _I / B _{H/L} (20...2000 Hz, 4.0 A, H-bridge) 4 x PWM _H / PWM _I / B _H (20...2000 Hz, 4.0 A) 12 x PWM _H / PWM _I / B _H (20...2000 Hz, 2.5 A) 12 x PWM _H / B _H 2.5 A 2 x A (0...10 V)
Sensor supply	1 x 5/10 V, max. 2 W configurable for the number of inputs/outputs and configuration options also see the wiring diagrams
Operating voltage Overvoltage	8...32 V --- 36 V for t ≤ 10 s
Reverse polarity protection	yes
Current consumption VBB ₃₀	max. 600 mA at 12 V max. 400 mA at 24 V

M30720	Technical data
CAN interfaces 0...3 Baud rate Communication protocol	CAN interface 2.0 A/B, ISO 11898 20 Kbits/s...1 Mbit/s (default 250 Kbits/s) CANopen, CiA DS 301 V4.2, CiA DS 401 V 1.4 SAE J 1939 / free protocol
Serial interface Baud rate Topology	RS-232 9.6...115.2 Kbits/s (default 115.2 Kbits/s) point-to-point (max. 2 participants); master-slave connection
Ethernet interface Transmission rate Protocols	1 interface with int. switch and 2 ports 10/100 Mbits/s TCP/IP, UDP/IP, Modbus UDP
Processor	32-bit TriCore CPU Infineon AURIX™
Device monitoring	overvoltage and undervoltage monitoring watchdog function check sum test for program and system excess temperature monitoring
Process monitoring concept	second switch-off way per output group via semiconductor switch
Physical memory	flash: 9 Mbytes RAM: 2.7 Mbytes remanent memory: 10 Kbytes
Memory allocation	see system manual www.ifm.com
Software/programming	
Programming system	CODESYS version 3.5 (IEC 61131-3)

Technical data

Wiring

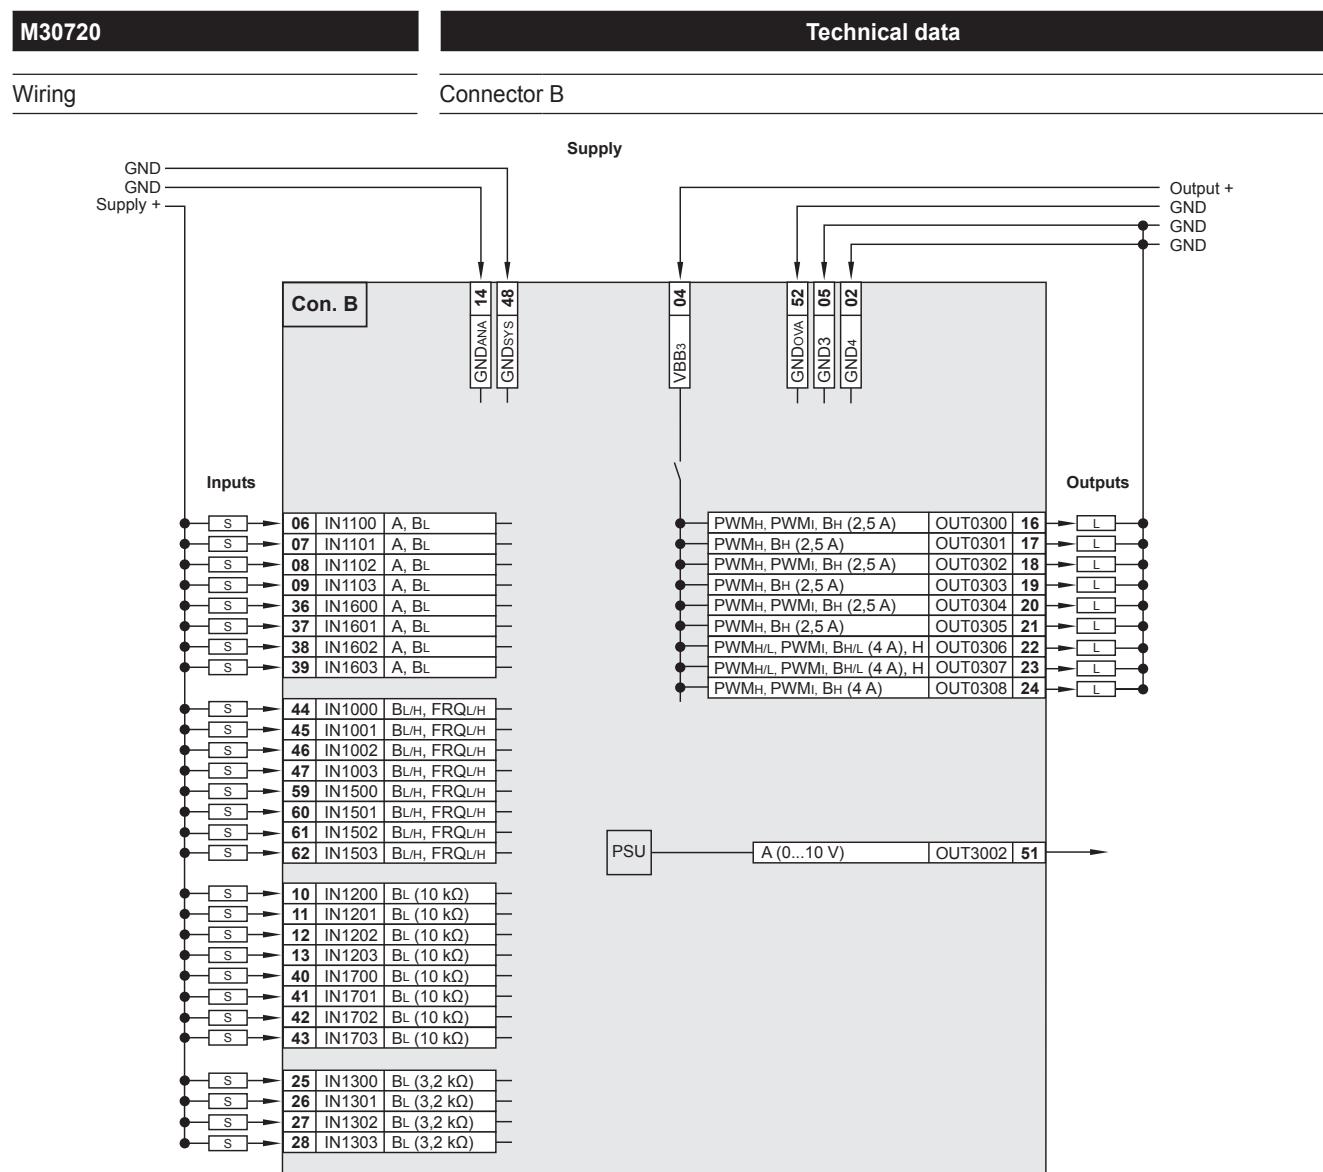

Connector A

Abbreviations

A	analogue
B _H	binary high side (CSO)
B _L	binary low side (CSI)
FRQ _{U/H}	frequency/pulse inputs configurable low side (CSI) / high side (CSO)
H	H-bridge function
PSU	pulse width modulation for the system
PWM _H	pulse-width modulation high side (CSO)
PWM _L	pulse-width modulation low side (CSI)
PWM _i	pulse-width modulation current-controlled
R	resistance input
VBB _{0...3}	supply output group via semiconductor switch
VBB ₃₀	supply sensors/module

7.1.7 Connector B / wiring

Abbreviations

A	analogue
B _H	binary high side (CSO)
B _L	binary low side (CSI)
FRQ _{L/H}	frequency/pulse inputs configurable low side (CSI) / high side (CSO)
H	H-bridge function
PSU	pulse width modulation for the system
PWM _H	pulse-width modulation high side (CSO)
PWM _L	pulse-width modulation low side (CSI)
PWM _I	pulse-width modulation current-controlled
R	resistance input
VBB _{0...3}	supply output group via semiconductor switch
VBB ₃₀	supply sensors/module

Technical data		Controller as black box system for the implementation of a central or decentralised system design
Mechanical data		
Housing		closed, screened metal housing with screw connection
Dimensions (H x W x D)		219 x 271 x 47 mm
Mounting		screw connection by means of 4 M6
Connection		2 x connector 81-pole, locked, mechanical reverse polarity protection, type Tyco / AMP contacts AMP-Junior-Timer, crimp connection 0.5/0.75/2.5 mm ² 2 x M12 connector 4 poles, D-coded 2 x M12 connector 5 poles, A-coded Shield connection Ø 4 mm for self-tapping screw
Weight		1.6 kg
Housing/storage temperature		-40...85 °C (depending on the load) / -40...85 °C
Max. perm. relative humidity		90 % (not condensing)
Height above sea level		max. 3000 m
Protection rating		IP 65 / IP 67 (for inserted connectors with individually sealed cores and inserted M12 connectors/sealing caps)
Electrical data		
Input/output channels total		124 (68 inputs / 56 outputs)
Inputs		configurable, with diagnostic capability 24 x A (0...10/32 V, 0...20 mA, ratiometric) / B _L 16 x FRQ _{LH} (≤ 30 kHz) / B _{LH} 4 x R (0.016...30 kOhm) / B _L 16 x B _L (impedance ≤ 10 kOhm) 8 x B _L (impedance ≤ 3.2 kOhm)
Outputs		configurable, with diagnostic capability 12 x PWM _{H/L} / PWM _I / B _{H/L} (20...2000 Hz, 4.0 A, H-bridge) 6 x PWM _H / PWM _I / B _H (20...2000 Hz, 4.0 A) 18 x PWM _H / PWM _I / B _H (20...2000 Hz, 2.5 A) 18 x PWM _H / B _H 2.5 A 2 x A (0...10 V)
Sensor supply		1 x 5/10 V, max. 2 W configurable for the number of inputs/outputs and configuration options also see the wiring diagrams
Operating voltage Overvoltage		8...32 V --- 36 V for t ≤ 10 s
Reverse polarity protection		yes
Current consumption VBB ₃₀		max. 600 mA at 12 V max. 400 mA at 24 V

M30721	Technical data
CAN interfaces 0...3 Baud rate Communication protocol	CAN interface 2.0 A/B, ISO 11898 20 Kbits/s...1 Mbit/s (default 250 Kbits/s) CANopen, CiA DS 301 V4.2, CiA DS 401 V 1.4 SAE J 1939 / free protocol
Serial interface Baud rate Topology	RS-232 9.6...115.2 Kbits/s (default 115.2 Kbits/s) point-to-point (max. 2 participants); master-slave connection
Ethernet interface Transmission rate Protocols	1 interface with int. switch and 2 ports 10/100 Mbits/s TCP/IP, UDP/IP, Modbus UDP
Processor	32-bit TriCore CPU Infineon AURIX™
Device monitoring	overvoltage and undervoltage monitoring watchdog function check sum test for program and system excess temperature monitoring
Process monitoring concept	second switch-off way per output group via semiconductor switch
Physical memory	flash: 9 Mbytes RAM: 2.7 Mbytes remanent memory: 10 Kbytes
Memory allocation	see system manual www.ifm.com
Software/programming	
Programming system	CODESYS version 3.5 (IEC 61131-3)
Indicators	
Status LED	2 x two-colour LED (R/G) for SYS0 and SYS1
Ethernet LED	2 x LED (G) for ETH0 and ETH1
Application LED	4 x three-colour LED (R/G/B) for APP0, APP1, APP2 and APP3

M30721

Operating states of the system

Technical data

LED SYS0		LED SYS1		System state
Colour	Status	Colour	Status	
–	off	–	off	no operating voltage
green	5 Hz	–	off	no operating system loaded
red	on	–	off	hardware error (fatal error+)
red	on	red	on	system error (fatal error)
green / yellow	2 Hz	green / yellow	2 Hz	update

Operating states PLC / application

LED	Co-lour	Status	Description	
SYS0	green	on	Standard PLC	no application
		2 Hz		run
		10 Hz		error application (serious error)
		2 Hz		debug run
		on		debug stop
SYS0	red	on	Safe PLC	no application
		2 Hz		run
		10 Hz		error application (serious error)
		2 Hz		debug run
		on		debug stop
ETH0	green	flashing	data transmission Ethernet	
		on	Ethernet connection OK, no data transfer	
ETH1	green	flashing	data transmission Ethernet	
		on	Ethernet connection OK, no data transfer	
APP0 ... APP3	red	on	status display of the application, freely programmable	
	green	on	status display of the application, freely programmable	
	blue	on	status display of the application, freely programmable

7.2.4 Connectors A and B / output characteristics

M30721	Connectors A and B / output characteristics	
Connector A: OUT0006...0007 OUT0106...0107 OUT0206...0207	Connector B: OUT0306...0307 OUT0406...0407 OUT0506...0507	Switching current Protective circuit for inductive loads Accuracy current feedback Diagnostics current feedback Diagnostics status feedback
Digital / PWM outputs 4.0 A, H-bridge (OUT PMW-40-BRIDGE-A)		0.025...4 A integrated 1 % configurable minimum and maximum values to detect short circuit and wire break detection of short circuit to VBB and short circuit to GND
Digital output (B_H)		Switching voltage Range diagnostics min - max.
Digital output (B_L)		Functions
PWM output (PWM_H)		Output frequency Pulse/pause ratio Resolution Range diagnostics min - max.
PWM output (PWM_L)		Output frequency Pulse/pause ratio Resolution
Current-controlled output (PWM_I)		Output frequency Control range Setting resolution Control resolution Load resistance Accuracy Range diagnostics min - max.
Connector A: OUT0008 OUT0108 OUT0208	Connector B: OUT0308 OUT0408 OUT0508	Switching voltage Switching current Protective circuit for inductive loads Accuracy current feedback Diagnostics current feedback Diagnostics status feedback
Digital / PWM outputs 4.0 A (OUT PMW-40-A)		8...32 V --- 0.025...4 A integrated 1 % configurable minimum and maximum values to detect short circuit and wire break detection of short circuit to VBB and short circuit to GND
Digital output (B_H)		Range diagnostics min - max.

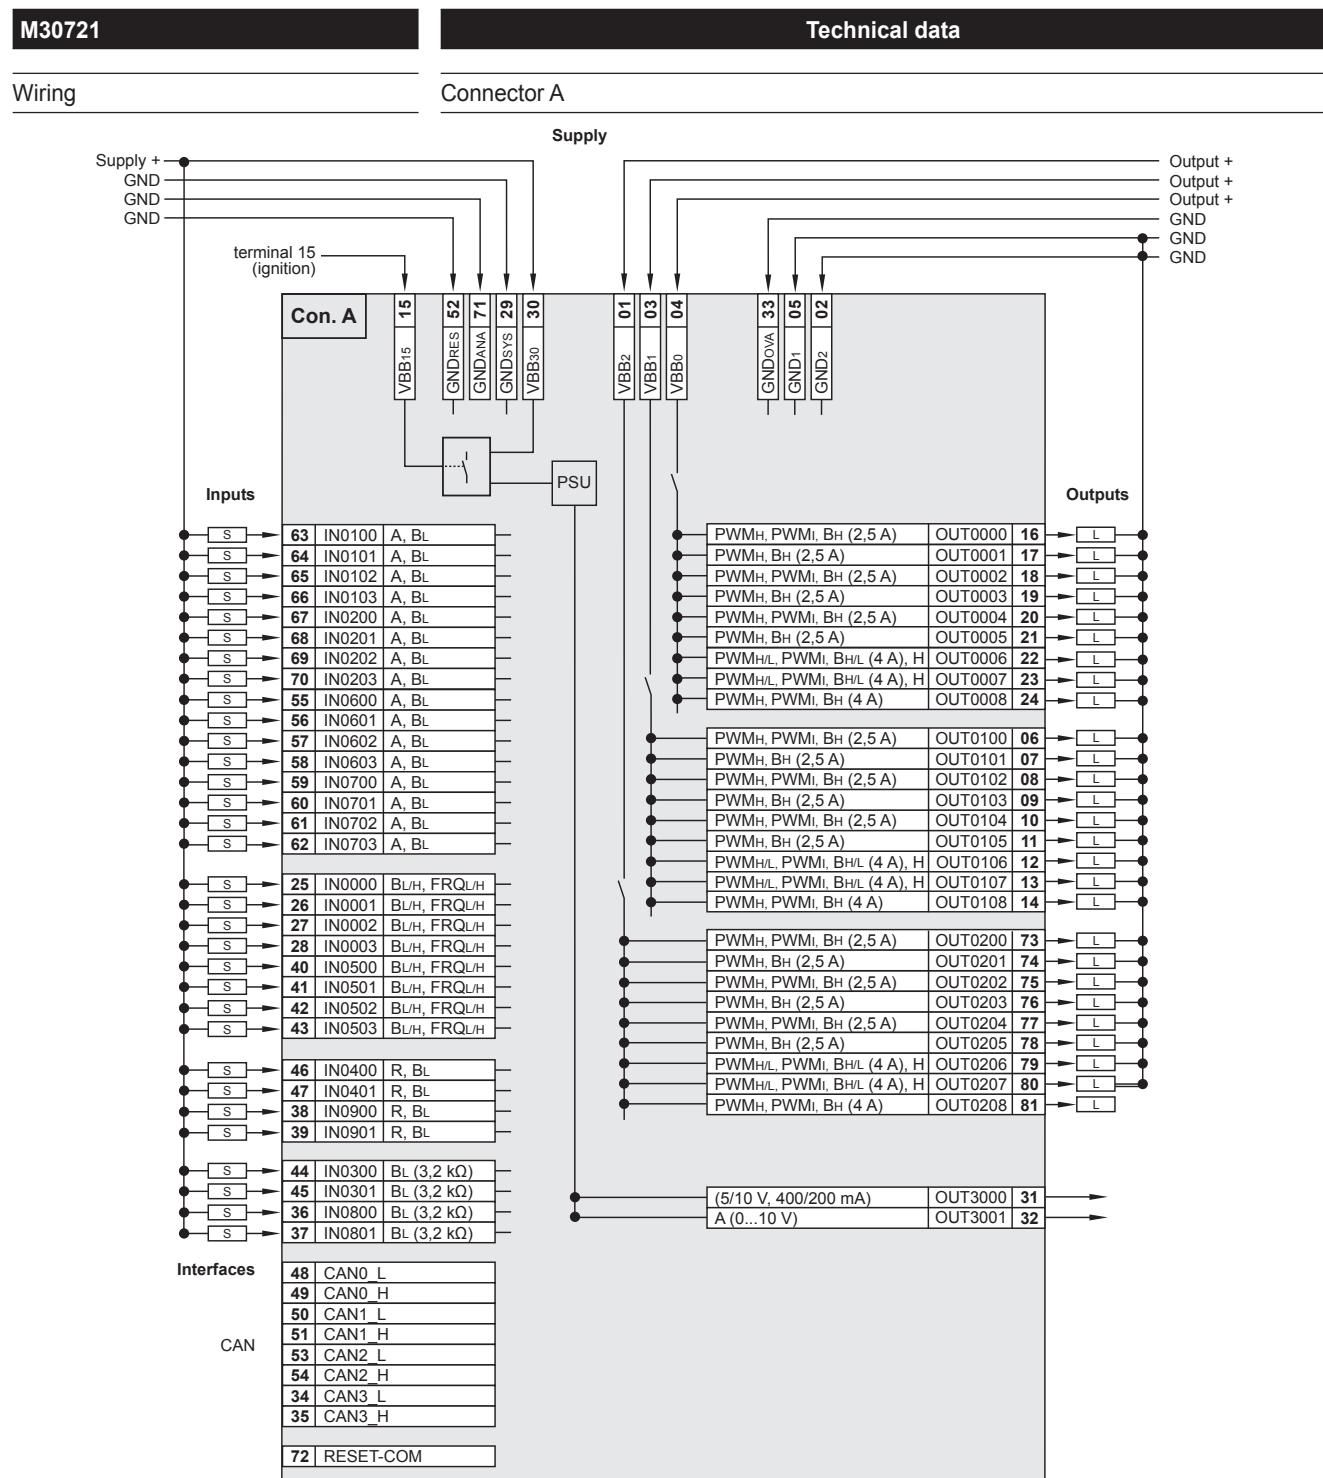

M30721	Connectors A and B / output characteristics	
PWM output (PWM_H)	Output frequency	20...2000 Hz (per channel)
	Pulse/pause ratio	1...1000 % (adjustable via software)
	Resolution	1 % (at 20...250 Hz)
	Range diagnostics min - max.	0 A / 4 A (default)
Current-controlled output (PWM_I)	Output frequency	20...2000 Hz (per channel)
	Control range	0.05...4 A
	Setting resolution	1 mA
	Control resolution	2 mA
	Load resistance	$\geq 3 \Omega$ / (at 12 V ---) $\geq 6 \Omega$ / (at 24 V ---)
	Accuracy	$\pm 1.5\%$ FS (for inductive loads)
	Range diagnostics min - max.	0 A / 4 A (default)
Connector A: OUT0000 OUT0002 OUT0004 OUT0100 OUT0102 OUT0104 OUT0200 OUT0202 OUT0204	Connector B: OUT0300 OUT0302 OUT0304 OUT0400 OUT0402 OUT0404 OUT0500 OUT0502 OUT0504	Switching voltage Switching current Protective circuit for inductive loads Accuracy current feedback Diagnostics current feedback Diagnostics status feedback
Digital / PWM outputs 2.5 A (OUT PMW-25-A)		detection of short circuit to VBB and short circuit to GND
Digital output (B_H)	Range diagnostics min - max.	0 A / 2.5 A (default)
PWM output (PWM_H)	Output frequency Pulse/pause ratio Resolution Range diagnostics min - max.	20...2000 Hz (per channel) 1...1000 % (adjustable via software) 1 % FS (at 20...250 Hz) 0 A / 2.5 A (default)
Current-controlled output (PWM_I)	Output frequency Control range Setting resolution Control resolution Load resistance Accuracy Range diagnostics min - max.	20...2000 Hz (per channel) 0.05...2.5 A 1 mA (at 20...250 Hz) 2 mA $\geq 4.8 \Omega$ / (at 12 V ---) $\geq 9.6 \Omega$ / (at 24 V ---) $\pm 1.5\%$ FS (for inductive loads) 0 A / 2.5 A (default)

M30721		Connectors A and B / output characteristics	
Connector A: OUT0001 OUT0003 OUT0005 OUT0101 OUT0103 OUT0105 OUT0201 OUT0203 OUT0205	Connector B: OUT0301 OUT0303 OUT0305 OUT0401 OUT0403 OUT0405 OUT0501 OUT0503 OUT0505	Switching voltage Switching current Protective circuit for inductive loads Accuracy current feedback Diagnostics current feedback Diagnostics status feedback	8...32 V === 0.025...2.5 A integrated 5 % configurable minimum and maximum values to detect short circuit and wire break detection of short circuit to VBB and short circuit to GND
Digital outputs 2.5 A (OUT PMW-25-B)			
Digital output (B_H)		Range diagnostics min - max.	0 A / 2.5 A (default)
PWM output (PWM_H)		Output frequency Pulse/pause ratio Resolution Range diagnostics min - max.	20...2000 Hz (per channel) 1...1000 % (adjustable via software) 1 % FS (at 20...250 Hz) 0 A / 2.5 A (default)
Connector A: OUT3000 Sensor supply (OUT SUPPLY-A)		for sensors and joysticks 5 V, 400 mA / 10 V, 200 mA, accuracy $\pm 5\%$ short-circuit proof and overload protected	
Connector A: OUT3001 Analogue outputs (OUT VOLTAGE-A)	Connector B: OUT3002	Voltage range Current rating Output voltage Accuracy	8...32 V < 5 mA 0...10 V $\pm 5\%$ FS
Output groups VBB_{0...5}		≤ 12 A One switch in series of 9 semiconductor outputs each. Forced controlling by means of hardware and additional controlling by means of user program.	
Load current per output group		Switching current Current diagnostics (excessive current)	0.1...12 A > 12 A
Internal semiconductor switches			
Short-circuit strength to GND		Switch-off of the outputs is carried out via the output driver	
Abbreviations		A analogue B_H binary high side (CSO) B_L binary low side (CSI) PWM_H pulse-width modulation high side (CSO) PWM_L pulse-width modulation low side (CSI) PWM_I pulse-width modulation current-controlled VBB _{0...5} supply output group via semiconductor switch VBB ₃₀ supply sensors/module	

7.2.5 Connectors

M30721	Technical data
Connectors	 <p>Connector A CAN0 ETH0 Connector B</p> <p>CAN1 + RS-232 ETH1</p>
CAN0	<p>M12 socket, 5 poles, A-coded</p> <p>1: not used: 2: not used: 3: CAN0_GND 4: CAN0_H 5: CAN0_L</p> 
CAN1 + RS-232	<p>M12 socket, 5 poles, A-coded</p> <p>1: RS-232_TxD 2: RS-232_RxD 3: CAN1_GND 4: CAN1_H 5: CAN1_L</p> 
ETH0 / ETH1	<p>M12 socket, 4 poles, D-coded</p> <p>1: TxD+ 2: RxD+ 3: TxD- 4: RxD-</p> 
Connector A	<p>AMP, 81-pole, A-coded</p> <p>1-81: see wiring connector A</p> 
Connector B	<p>AMP, 81-pole, B-coded</p> <p>1-81: see wiring connector B</p> 

7.2.6 Connector A / wiring

Abbreviations

A	analogue
B _H	binary high side (CSO)
B _L	binary low side (CSI)
FRQ _{UH}	frequency/pulse inputs configurable low side (CSI) / high side (CSO)
H	H-bridge function
PSU	pulse width modulation for the system
PWM _H	pulse-width modulation high side (CSO)
PWM _L	pulse-width modulation low side (CSI)
PWM _I	pulse-width modulation current-controlled
R	resistance input
VBB _{0...5}	supply output group via semiconductor switch
VBB ₃₀	supply sensors/module

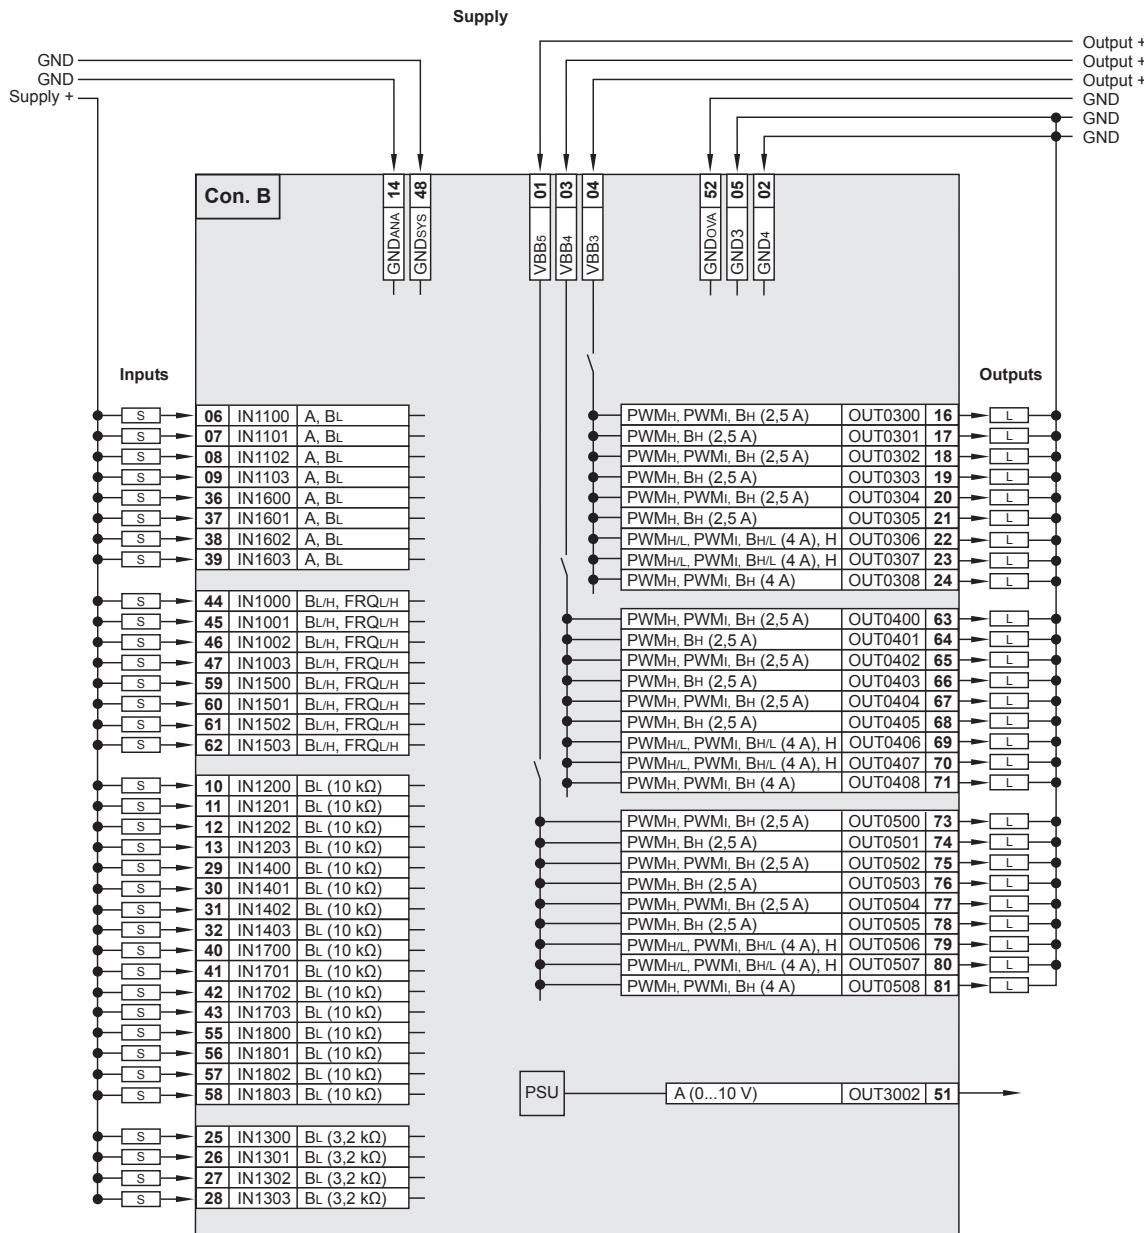

7.2.7 Connector B / wiring

M30721

Technical data

Wiring

Connector B

Abbreviations

A	analogue
B _H	binary high side (CSO)
B _L	binary low side (CSI)
FRQ _{L/H}	frequency/pulse inputs configurable low side (CSI) / high side (CSO)
H	H-bridge function
PSU	pulse width modulation for the system
PWM _H	pulse-width modulation high side (CSO)
PWM _L	pulse-width modulation low side (CSI)
PWM _I	pulse-width modulation current-controlled
R	resistance input
VBB _{0..5}	supply output group via semiconductor switch
VBB ₃₀	supply sensors/module

8 Maintenance, repair and disposal

The unit is maintenance-free.

- Do not open the housing as the device does not contain any components which can be maintained by the user. The device must only be repaired by the manufacturer.
- Dispose of the device in accordance with the national environmental regulations.

9 Approvals/standards

Test standards and regulations (→ 7 Technical data)

The EC declaration of conformity and approvals can be found at:
