Additional Information

Programmed switching output function

Switch output 1 (N.O.)	Object range	
Switch output 2 (N.C.)		
Switch point 1 -> ∞ :	Switch output 1, (N.O.) Detection of object presence	
Switch point 2 -> ∞ :	Switch output 2, (N.C.) Detection of object presence	

Accessories

UB-PROG3 Programming unit

OMH-04

Mounting aid for round steel ø 12 mm or sheet 1.5 mm ... 3 mm

BF 18

Mounting flange, 18 mm

BF 18-F

Mounting flange with dead stop, 18 mm

BF 5-30

Universal mounting bracket for cylindrical sensors with a diameter of 5 ... 30 mm

UVW90-K18 Ultrasonic -deflector

V15-G-2M-PVC Female cordset, M12, 5-pin, PVC cable

M18K-VF

Description of Sensor Functions

Programming procedure

The sensor features two switch outputs with one programmable switch point, each. Programming the switch points is done by applying the supply voltage -U_B (switch output 1) or +U_B (switch output 2) to the Teach-In input. The supply voltage must be applied to the Teach-In input for at least 1 s. LEDs indicate whether the sensor has recognized the target during the programming procedure.

Note:

Switching points may only be specified directly after Power on. A time lock secures the adjusted switching points against unintended modification 5 minutes after Power on. To modify the switching points later, the user may specify the desired values only after a new Power On.

Note:

If a programming adapter UB-PROG3 is used for the programming procedure, button A1 is assigned to -U_B and button A2 is assigned to +U_B.

Programming switch ouputs

Switch point for switch output 1

- 1. Place the target at the desired switch point position of switch output 1
- 2. Program the switch point by applying -U_B to the Teach-In input (corresponding yellow LED flashes)
- 3. Disconnect the Teach-In input from -U_B to save the switch point
- Switch point for switch output 2
- 1. Place the target at the desired switch point position of switch output 2
- 2. Program the switch point by applying +U_B to the Teach-In input (corresponding yellow LED flashes)
- 3. Disconnect the Teach-In input from $+U_B$ to save the switch point

Programming detection of object presence

- 1. Cover the sensor face with hand or remove all objects from sensing range
- 2. Apply -U_B to the Teach-In input (red LED flashes)
- 3. Disconnect the Teach-In input from -UB
- 4. Apply $+U_B$ to the Teach-In input (red LED flashes)
- 5. Disconnect the Teach-In input from +UB

Note: Only one switch output can be configured for detection of presence of objects. If the sensor detects an object within the maximum detection range, the switch output switches.

Adjusting the sound cone characteristics:

The ultrasonic sensor enables two different shapes of the sound cone, a wide angle sound cone and a small angle sound cone.

1. Small angle sound cone

- · switch off the power supply
- connect the Teach-In input wire to -UB
- switch on the power supply
- the red LED flashes once with a pause before the next.
- ÷Ř: 「 yellow LED: permanently on: indicates the presence of an object or disturbing object within the sensing range
- disconnect the Teach-In input wire from -U_B and the changing is saved

2. Wide angle sound cone

- switch off the power supply
- connect the Teach-In input wire with +UB
- switch on the power supply
- the red LED double-flashes with a long pause before the next. ٠
- yellow LED: permanently on: indicates an object or disturbing object within the sensing range
- disconnect the Teach-In input wire from +U_B and the changing is saved

pause

	Red LED	Yellow LED 1	Yellow LED 2
During Normal operation			
Proper operation	Off	Switching state	Switching state
		output 1	output 2
Interference (e.g. compressed air)	On	remains in previous	remains in previous
		state	state
Programming of output 1			
Object detected	Off	Flashes	Off
No object detected	Flashes	Off	Off
Object uncertain (programming invalid)	On	Off	Off
Programming of output 2			
Object detected	Off	Off	Flashes
No object detected	Flashes	Off	Off
Object uncertain (programming invalid)	On	Off	Off

Installation conditions

If the sensor is installed at places, where the environment temperature can fall below 0 °C, for the sensors fixation, one of the mounting flanges BF18, BF18-F or BF 5-30 must be used.

In case of direct mounting of the sensor in a through hole using the steel nuts, it has to be fixed at the middle of the housing thread. If a fixation at the front end of the threaded housing is required, plastic nuts with centering ring (accessories) must be used.
