Background suppression sensor

With fixed cable and M8 device plug, 3-pin

Features

- Diffuse mode sensor with multiple light spots

- Specially designed for detecting critical objects such as PCBs

- Miniature design

- Detects objects in front of a close background through precise background suppression

- Can be adapted to the application in question thanks to the adjustable detection range

- Precision object detection, almost irrespective of the color

- Not sensitive to ambient light, even with switched energy saving lamps

Electrical connection

○ = Light on
● = Dark on

Product information

The ML100 series is characterized by its miniature housing with integral, all-metal threaded bushings. All versions are equipped with a visible red transmitter LED. This greatly simplifies installation and commissioning. The switching states are easily visible from all directions thanks to the highly visible LEDs.

Configuration Information

Setting mode (A-Mode):

A-Mode is an additional switch position that is integrated into the light ON/dark ON switch. A-Mode is located between position L and position D. A-Mode is a help mode which enables you to detect whether all three light spots are directed onto the object.

If A-Mode is selected, the yellow signal indicator LED flashes; the number of times that the LED flashes equates to the number of detected light spots.

The following scenarios exist:
- No flashing/LED off: No light spots detected
- Fast flashing (8 Hz): One light spot detected
- Slow flashing (4 Hz): Two light spots detected
- Static illumination/LED on: Three light spots detected

As soon as you exit A-Mode, the yellow LEDs light up in the standard manner again.
