Reflex Sensor with Background Suppression

Part Number

- Condition monitoring
- IO-Link 1.1
- Low switching distance deviation for black/white
- Reliably detect objects against any background

The reflex sensor with background suppression works with red light according to the angle measurement principle and is designed to detect objects against any background. The sensor always has the same switching distance, regardless of the color, shape and surface of the objects. The sensor detects minimal height differences and, for example, differentiates reliably various parts from each other. The IO-Link interface can be used to configure the reflex sensors (PNP/NPN, NC/NO, switching distance), as well as for reading out switching statuses and distance values.

Technical Data

| Optical Data | | |
|--|----------------|--|
| Range | 500 mm | |
| Adjustable Range | 60500 mm | |
| Switching Hysteresis | < 3 % | |
