

 $\epsilon$ 

# **Model Number**

#### MLV12-54/49/124

Retroreflective sensor with metal connector M12; 5-pin, 90° convertible

#### **Features**

- Robust photoelectric sensor series in a widely used standard housing
- Resistant against noise: reliable operation under all conditions
- Clear and functional display concept for the operating modes
- High level of stability thanks to the metal housing frame
- Tightly sealed thanks to welded plastic components
- Suitable for operation at low temperatures down to -40 °C

### **Dimensions**

# **Electrical connection**

- O = Light on
- = Dark on

#### **Pinout**

Wire colors in accordance with EN 60947-5-2

### **Accessories**

# OMH-MLV12-HWG

Mounting bracket for series MLV12 sensors

### OMH-MLV12-HWK

Mounting bracket for series MLV12 sensors

### OMH-K01

dove tail mounting clamp

### OMH-K02

dove tail mounting clamp

# OMH-K03

dove tail mounting clamp

#### **OMH-06**

Mounting aid for round steel ø 12 mm or sheet 1.5 mm ... 3 mm

Other suitable accessories can be found at www.pepperl-fuchs.com

CCC approval

CCC approval / marking not required for products rated ≤36 V

## **Curves/Diagrams**

# **Additional Information**

## Conventional use

The reflex light beam switch contains the emitter and receiver in a single housing. The light from transmitter is beamed back from a reflector to the receiver. If an object interrupts the light beam the switching function is initiated.

#### **Mounting instructions**

The sensor can be fastened over the through-holes directly or with a support angle or clamping components (this are not contained in the scope of supply).

The base surface must be flat to avoid distorting the housing during mounting. It is advisable to secure the bolts and screws with washers to prevent misalignment.

### Adjustment instructions

Connect the sensor to operating voltage, the LED green lights up constantly.

Mount suitable reflector opposite light beam switch and align roughly.

The exact adjustment takes by swivelling the sensor horizontally and vertically. With optimum light reception the yellow LED lights up constantly. They flash if setting is inexact.

## Object detection check

Move the object into the light beam. If the object is recorded, the yellow LED switch off. If it does not switch off, reduce the sensitivity with the potentiometer until the switches off. It should lights up constantly on again when the object is removed.

#### Lustration

115228 eng.xml

Date of issue: 2019-11-27

Release date: 2019-11-27 14:02

The yellow LED flashes if reception deteriorates (e.g. soiled lenses.)

We recommend that you clean the optical interfaces and check the plug- and screw connections at regular intervals.
