Photoelectric slot sensor With flat connector, 4-pin

### **Features**

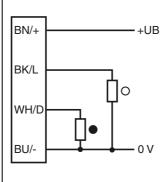

- Miniature design ٠
- Optimized for the detection of small ٠ parts
- High switching frequency ٠
- Simple and fast mounting •
- Clearly visible LED functional display ٠

# **Product information**

The GL5 miniature slot sensor compares a high optical performance in a small housing and is optimized to the requirements in semiconductors industry for small part detection. A wide voltage range of 5 - 24 V DC and the fastest switching frequency of 5 kHz in its class stands for the quality of this sensor. The integrated aperture allows the small part detection with a minimum object size of 0.8 x 1.8 mm. The sensor offers antivalent npn or pnp outputs. Due to a variety of different housings and an optimized housing concept offers the sensor a maximum of freedom in a crowded mounting environment.

#### Applications

The GL5 is suited for applications in the semiconductor and electronic industrial environment.

Typical applications include:

- 1. Detection of lead frames
- 2. Detection of cam positions
- Detection of limit positions of moving objects З.
- 4. Position detection of wafer cases
