

**Model Number**

**UC2000-30GM-IU-V1-HB**

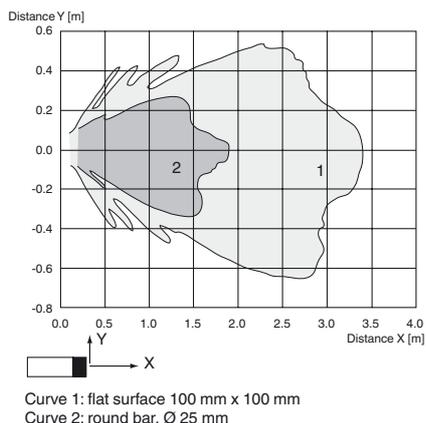

Single head system

**Features**

- **Parameterization interface for the application-specific adjustment of the sensor setting via the service program ULTRA 3000**
- **Analog current and voltage output**
- **Adjustable acoustic power and sensitivity**
- **Temperature compensation**
- **UL and CSA NRTL certified for hazardous area installation**

**Diagrams**

**Characteristic response curve**

**Technical data**

**General specifications**

Sensing range	80 ... 2000 mm
Adjustment range	120 ... 2000 mm
Dead band	0 ... 80 mm
Standard target plate	100 mm x 100 mm
Transducer frequency	approx. 180 kHz
Response delay	65 ms minimum 195 ms factory setting

**Indicators/operating means**

LED green	solid: Power-on flashing: Standby mode or program function object detected
LED yellow 1	solid: object in evaluation range flashing: program function
LED yellow 2	solid: object in detection range flashing: program function
LED red	solid: temperature/program plug not connected flashing: fault or program function object not detected
Temperature/TEACH-IN connector	Temperature compensation , Evaluation range programming , output function setting

**Electrical specifications**

Operating voltage $U_B$	10 ... 30 V DC , ripple 10 % <sub>SS</sub>
Power consumption $P_0$	≤ 900 mW

**Interface**

Interface type	RS 232, 9600 Bit/s , no parity, 8 data bits, 1 stop bit
----------------	---

**Input/Output**

Synchronization frequency	
Common mode operation	≤ 30 Hz
Multiplex operation	≤ 30/n Hz, n = number of sensors

**Output**

Output type	1 current output 4 ... 20 mA 1 voltage output 0 ... 10 V
Resolution	evaluation range [mm]/4000, but ≥ 0.35 mm
Deviation of the characteristic curve	≤ 0.2 % of full-scale value
Repeat accuracy	≤ 0.1 % of full-scale value
Load impedance	current output: ≤ 500 Ohm voltage output: ≥ 1000 Ohm
Temperature influence	≤ 2 % from full-scale value (with temperature compensation) ≤ 0.2 %/K (without temperature compensation)

**Standard conformity**

Standards	EN 60947-5-2
-----------	--------------

**Ambient conditions**

Ambient temperature	-25 ... 70 °C (-13 ... 158 °F)
Storage temperature	-40 ... 85 °C (-40 ... 185 °F)

**Mechanical specifications**

Connection type	Cable connector , M12 x 1 , 5-pin , 4-wire
Degree of protection	IP65
Material	
Housing	1.4303 stainless steel plastic parts PBT
Transducer	epoxy resin/hollow glass sphere mixture; polyurethane foam
<b>Note</b>	Individual components: UC-2000-30GM-IUR2-V15; V1-G-2M-PVC; M-106 impact adapter; ADAPT-ALUM*-M30X1/2" NPT/HB****

**Compliance with standards and directives**

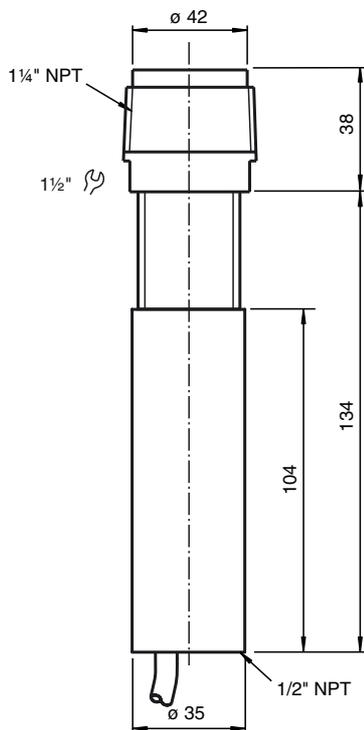

Standard conformity	
Standards	EN 60947-5-2:2007 IEC 60947-5-2:2007 EN 60947-5-7:2003 IEC 60947-5-7:2003

**Approvals and certificates**

UL approval	all Div 2 hazardous areas
CSA approval	NRTL certified all Div 2, Class II Div 1, Class III Div 1 hazardous areas
CCC approval	CCC approval / marking not required for products rated ≤36 V

Release date: 2018-02-27 15:58 Date of issue: 2018-02-27 09:45:40\_eng.xml

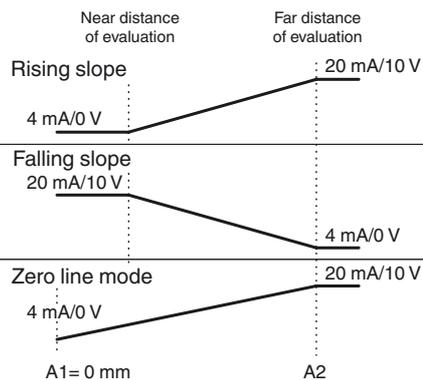

**Dimensions**

**Additional Information**

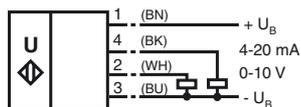

**Analogue output function**

Analogue function

**Electrical Connection**

Standard symbol/Connection:  
(version IU)

Core colours in accordance with EN 60947-5-2.

**Accessories**

**ULTRA3000**

Software for ultrasonic sensors, comfort line

**UC-30GM-R2**

**V1-W-2M-PUR**

Female cordset, M12, 4-pin, PUR cable

**V1-G-2M-PVC**

Female cordset, M12, 4-pin, PVC cable

**Description of Sensor Functions**

Release date: 2018-02-27 15:58 Date of issue: 2018-02-27 09:45:40\_eng.xml

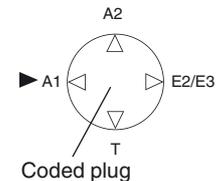

**Programming procedure**

The sensor features 2 programmable analog outputs with programmable evaluation range. Programming the evaluation range and the operating mode is done either via the sensor's RS232 interface and ULTRA3000 software (see the ULTRA3000 software description) or by means of the programming plug at the sensor's back end which is described here.

**Programming of Evaluation Range**

1. Disconnect supply voltage
2. Remove the programming plug to activate program mode.
3. Reconnect supply voltage (Reset)
4. Place the target at the desired position for A1
5. Momentarily insert the programming plug in position A1 and then remove. This will program the position A1.
6. Place the target at the desired position for A2
7. Momentarily insert the programming plug in position A2 and then remove. This will program the position A2.

**Notes:**

- Removing the programming plug saves the new position into the device memory.
- The programming status is indicated by the LED. A flashing green LED indicates that the target is detected; a flashing red LED indicates that no target is detected.

**Programming the Operation Mode**

If the program mode is still activated, continue at number 4. If not, activate program mode by performing the sequence numbers 1 to 3.

1. Disconnect supply voltage
2. Remove the programming plug to activate program mode.
3. Reconnect supply voltage (Reset)
4. Insert the programming plug in position E2/E3. By removing and reinserting the plug, the user can toggle through the three different modes of operation. The selected mode is indicated by the LEDs as shown below:
  - Rising slope mode, LED A2 flashes
  - Falling slope mode, LED A1 flashes
  - Zero line mode, LEDs A1 and A2 flash
5. Once the desired mode is selected, insert the programming plug in position T. This completes the programming procedure and saves the switch points and mode of operation.
6. The sensor now operates in normal mode.

**Note:**

The programming plug also functions as the temperature compensation. If the programming plug has not been inserted in the T position within 5 minutes, the sensor will return to normal operating mode with the latest saved values, without temperature compensation.

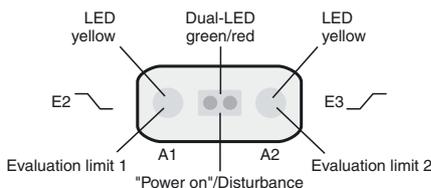

**Factory settings**

- Operation mode = rising slope mode
- A1 = end of unusable area (see technical data)
- A2 = nominal sensing range (see technical data)

**Display**

The sensor provides LEDs to indicate various conditions.

	Green LED	Red LED	Yellow LED A1	Yellow LED A2
<b>During Normal Operation</b>				
- Temperature compensated	On	Off	Object in evaluation range	Object in sensing range
- with removed programming plug	Off	On	Object in evaluation range	Object in sensing range
Interference (e.g. compressed air)	Off	Flashing	remains in previous state	remains in previous state
<b>During Sensor Programming</b>				
<b>Evaluation limit A1:</b>				
Object detected	Flashing	Off	Flashing	Off
No object detected	Off	Flashing	Flashing	Off
<b>Evaluation limit A2:</b>				
Object detected	Flashing	Off	Off	Flashing
No object detected	Off	Flashing	Off	Flashing
<b>Operation mode:</b>				
Rising slope mode	On	Off	Off	Flashing
Falling slope mode	On	Off	Flashing	Off
Zero line mode	On	Off	Flashing	Flashing
<b>Standby</b>	Flashing	Off	remains in previous state	remains in previous state

Release date: 2018-02-27 15:58 Date of issue: 2018-02-27 09:45:40\_eng.xml

### Note on communication with the UC-30GM-R2 interface cable

The UC-30GM-R2 interface cable allows for communication with the ultrasonic sensor using ULTRA3000 software. The cable creates a connection between a PC RS-232 interface and the programming plug socket on the sensor. When connecting to the sensor, make certain the plug is lined up correctly; otherwise no communication will be possible. The key of the cable's plug must be aligned to the groove of the socket on the sensor (not with the arrow symbol on the sensor).

#### Programmable parameters with the ULTRA3000 software

- Evaluation limits A1 and A2
- Operation mode
- Sonic speed
- Temperature offset (The inherent temperature-rise of the sensor can be considered in the temperature compensation)
- Expansion of the unusable area (for suppression of unusable area echoes)
- Reduction of the detection range (for suppression of remote range echoes)
- Time of measuring cycle
- Acoustic power (interference of the burst duration)
- Sensitivity
- Behavior of the sensor in case of echo loss
- Behavior of the sensor in case of a fault
- Average formation via an allowed number of measuring cycles
- Selection of the parameter set, RS 232 or manually

#### Note:

When connected to a PC and running the ULTRA3000 software, the sensor can act as a long term data logger as well.
