Reflex ultrasonic sensor

CE

Model Number

UBR250-F77-E0-V31

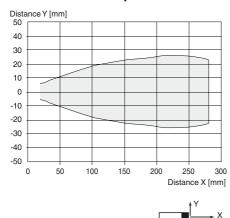

Reflex ultrasonic sensor

Features

- Miniature design
- **Program input** •
- **Degree of protection IP67** .
- Switching status indicator, yellow LED

Dimensions

Description of Sensor Function

The ultrasonic sensor works like a retroreflective sensor. It transmits ultrasonic packages in quick succession and responds to their reflection off a reference object at a defined distance. The distance T to the reference object can be taught in. The sensor has a switch output. This output switches if the reference object is not detected, which happens when another object is located between the sensor and the reference object. The limit of the switching range is derived as follows: T - 5 %.

Notes

- The distance T of the reference object must not be changed during operation. If the distance
- T changes, it will have to be taught-in again. - The reference object must not be removed during operation.

Teach-In the Distance to the Reference Object

Proceed as follows to teach in the distance T to the reference object:

- 1. Connect the sensor and turn on the operating voltage.
- Place the reference object at the required distance. 2.
- 3. Connect the teach-in input (ET) to -U_B. This can be done using the pushbutton or the controller
- The LED will start flashing after 3 seconds to indicate that the sensor is ready to start the teach-in process ^(*).
- 4. Disconnect the teach-in input (ET) with -U_B. The distance T to the reference object has now been taught in (*)
- If no object is detected within the sensing range of the sensor, the sensor will start flash-(*) ing at a faster rate. The switching point remains unchanged.

Switching characteristics and display LED

Sensing range				Output	LED
	Adjustment i				
	Switching area	5%	Reference		
		of	object	-U _B	Off
	•	Т	(position T)	+U _B	On
				+U _B	On

Object position
