

CE SafeBox

### **Dimensions**

13 14 15 16 9 10 11 12	1 2 3 4 5 6 7 8	22.6
	99	_

### **Model Number**

#### SB4 Module 4M

Safety control unit module Module for Evaluation unit SafeBox - series SB4

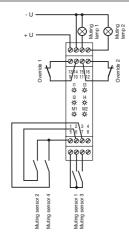

### **Features**

- Muting module
- 4 sensor channels
- Double muting
- Emergency muting for the correction of the material jam
- Operating mode can be selected by means of DIP switches
- Screw terminals or spring terminals

### **Electrical connection**

**Ambient conditions** 

Ambient temperature 0 ... 50 °C (32 ... 122 °F) -20 ... 70 °C (-4 ... 158 °F) Storage temperature

Mechanical specifications	
Degree of protection	IP20
Connection	screw terminals , lead cross section 0.2 2 mm <sup>2</sup> Option /165: Cage tension spring terminals , Cable cross-section 0.2 1.5 mm <sup>2</sup>
Material	
Housing	Polyamide (PA)
Mass	approx. 150 g
General information	
Ordering information	without Option /165 -> with screw terminals with Option /165 -> spring clamp terminals
Approvals and certificates	
CE conformity	CE
UL approval	cULus
TÜV approval	ΤÜV

This module can only be operated within an evaluation device of the SafeBox SB4 type.

The SafeBox instruction manual should be observed.

### **Function**

The muting module realises the muting function for the sensor channels of the four to six channel sensor card module immediately to the right of the module.

The user must make sure to only connect sensors that can be muted to the sensor card that is assigned to the muting module. These are, for example, light barriers or light grids.

Emergency off push buttons must not be

### **Muting sensors**

Muting sensors are supposed to detect the muting objects. If an object is detected, the output of the muting sensor switches through its supply voltage. For this purpose, sensors with relay or pnp output are suitable. In a de-energised state, the output of the muting sensor must not be active. The sensor output should be capable of reliably switching a load current of 8 mA at 20 V. Muting sensors with a current consumption of a maximum of 30 mA can be supplied directly from the muting module. Sensors with a higher current consumption require an external power supply. Muting sensors must be selected such that they also work at a supply voltage of at least 12 V.

The cables to the muting sensors must be laid in such a way that no short circuits are possible between the muting sensors.

As muting sensors, the following sensors can be used, for example:

- · Retro-reflective sensors dark on or light on (in this case reflector at the object),
- · Photoelectric sensors (light on),
- · Inductive sensors, mechanical switches.

### **Settings**

The assembly contains 8 DIP switches for selecting the different muting operating modes. For selecting functions, 2 selector switches must always be actuated.

### Position of the DIP switches

switch	Position	Operation type
1 Group 1 and 2	OFF	Muting lamp monitor- ing inactive
	ON	Muting lamp monitor- ing active
2 Group 1 and 2	OFF	Single muting
	ON	Double muting
3 Group 1 and 2	OFF	Time window-limited muting
	ON	Protection beam-lim- ited muting
4 Group 1 and 2	OFF	Sequential muting
	ON	Parallel muting

# **Displays**

The muting module has a yellow display for each muting sensor. For each muting lamp there is a white display.

If there is an error in the muting module, only the yellow displays on this assembly are flashing.

In the case of an error on the muting lamps, the white muting displays are flashing.

Display	LED	Meaning
l1 - l4	yellow	Continuous light: muting sensor activated
		Flashing (5 Hz). Muting sensor error
M1, M2	white	Continuous light: muting activated
		Flashing (5 Hz). Muting lamp error
