

### **Model Number**

#### OQT350-R200-EP-IO-V3-L

Triangulation sensor (SbR) with 3-pin, M8 x 1 connector

#### **Features**

- Medium design with versatile mounting options
- Multi Pixel Technology (MPT) flexibility and adaptability
- Reduction of device variety several switch points within one sensor
- Reliable detection of all surfaces, independent of color and structure
- · Low sensitivity to target color
- IO-link interface for service and process data

### **Product information**

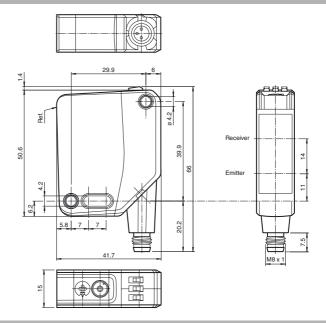

The optical sensors in the series are the first devices to offer an end-to-end solution in a medium-sized standard design—from the thru-beam sensor through to the measuring distance sensor. As a result of this design, the sensors are able to perform practically all standard automation tasks.

The entire series enables sensors to communicate via IO-Link.

The DuraBeam laser sensors are durable and can be used in the same way as a standard sensor.

Multi Pixel Technology (MPT) ensures that the standard sensors are flexible and can be adapted to the application environment.

### **Dimensions**

### **Electrical connection**

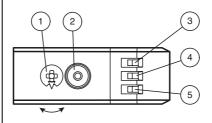

### **Pinout**

Wire colors in accordance with EN 60947-5-2

General specifications		
Detection range		60 350 mm
Detection range min.		60 100 mm
Detection range max.		40 400 mm
Adjustment range		100 350 mm
Reference target		standard white, 100 mm x 100 mm
Light source		laser diode
Light type		modulated visible red light
Laser nominal ratings		
Note		LASER LIGHT , DO NOT STARE INTO BEAM
Laser class		1
Wave length		680 nm
Beam divergence		> 5 mrad, d63 < 2,8 mm in the range of 350 mm 800 mm
Pulse length		5.5 μs
Repetition rate		approx. 2.4 kHz
max. pulse energy		< 40 nJ
Black/White difference (6 %/90	%)	<2 %
Diameter of the light spot		approx 3 mm at a dictance of 350 mm
Diameter of the light spot		approx. 3 mm at a distance of 350 mm
Angle of divergence		approx. 0.3 °
Ambient light limit		EN 60947-5-2 : 45000 Lux
Functional safety related para	ineters	F60 a
MTTF <sub>d</sub>		560 a
Mission Time (T <sub>M</sub> )		20 a
Diagnostic Coverage (DC)		0 %
ndicators/operating means		1-0
Operation indicator		LED green:
		constantly on - power on flashing (4Hz) - short circuit
		flashing with short break (1 Hz) - IO-Link mode
Function indicator		LED yellow:
		constantly on - switch output active
		constantly off - switch output inactive
Control elements		Teach-In key
Control elements		5-step rotary switch for operating modes selection
Electrical specifications		
Operating voltage	$U_B$	10 30 V DC
Ripple		max. 10 %
No-load supply current	I <sub>0</sub>	< 16 mA at 24 V supply voltage
Protection class		III
nterface		
Interface type		IO-Link ( via C/Q = pin 4 )
Device profile		Identification and diagnosis

### Laserlabel

#### **Accessories**

#### V3-GM-2M-PUR

Female cordset single-ended, M8, 3-pin, PUR cable

### V3-WM-2M-PUR

Female cordset single-ended, M8, 3-pin, PUR cable

### IO-Link-Master02-USB

IO-Link master, supply via USB port or separate power supply, LED indicators, M12 plug for sensor connection

# OMH-MLV12-HWK

Mounting bracket for series MLV12 sensors

#### OMH-R200-01

Mounting aid for round steel ø 12 mm or sheet 1.5 mm ... 3 mm

### OMH-R20x-Quick-Mount

Quick mounting accessory

#### OMH-MLV12-HWG

Mounting bracket for series MLV12 sensors

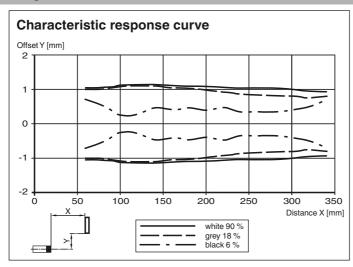

Other suitable accessories can be found at www.pepperl-fuchs.com

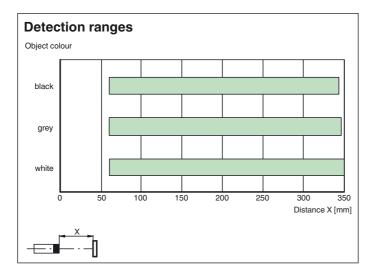

**FPEPPERL+FUCHS** 

2

Housing height	50.6 mm
Housing depth	41.7 mm
Degree of protection	IP67 / IP69 / IP69K
Connection	Connector plug, M8 x 1, 3 pin, rotatable by 90°
Material	
Housing	PC (Polycarbonate)
Optical face	PMMA
Mass	approx. 35 g
Approvals and certificates	
UL approval	E87056, cULus Listed, class 2 power supply, type rating 1
CCC approval	CCC approval / marking not required for products rated ≤36 V
FDA approval	IEC 60825-1:2014 Complies with 21 CFR 1040.10 and 1040.11 except for deviations pursuant to Laser Notice No. 50, dated June 24, 2007

### **Curves/Diagrams**

# **Settings**

### Teach-In (TI)

Use the rotary switch for switching signal Q1 or Q2 to select the relevant switching threshold A and/or B to teach in.

• The yellow LEDs indicate the current state of the selected output.

To teach in a switching threshold, press and hold the "TI" button for approximately 1 s, until the yellow and green LEDs flash in phase. Teach-in starts when the "TI" button is released.

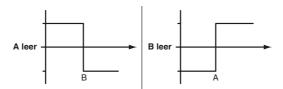

- Teach-in successful: the yellow and green LEDs flash alternately at 2.5 Hz.
- Teach-in unsuccessful: the yellow and green LEDs quickly flash alternately at 8 Hz.

After an unsuccessful Teach-in, the sensor continues to operate with the previous valid setting after the relevant visual fault signal is issued.

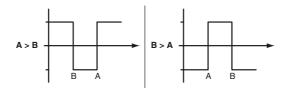

Set switching mode: you can define different switching modes by teaching in the relevant distance data for switching thresholds A and B.

1. Single point mode:

#### 2. Window mode:

Teach in switching thresholds: you can teach in or overwrite a taught-in switching threshold at any time. To do this, press the "TI" button again.

Reset a value: you can reset a taught-in value. To do this, press the "TI" button for > 4 s, until the yellow and green LEDs go out. The reset process itself starts when the "TI" button is released.

Reset successful: the yellow and green LEDs flash alternately at 2.5 Hz.

#### **Resetting to Factory Settings**

To revert back to factory settings, press the "TI" button for > 10 s with the rotary switch set to position "O," until the yellow and green LEDs go out at the same time. The reset process itself starts when the "TI" button is released.

 Reset to factory settings successful: the yellow and green LEDs light up at the same time. The sensor then continues to operate with factory settings.

#### OQT

- Factory setting for switching signal Q1:
  - Switching signal high active, BGS mode (background suppression)
- Factory setting for switching signal Q2:
- Switching signal high active, BGS mode (background suppression)

### Configuration via IO-Link interface

#### Configuring different operating modes via the IO-Link interface

The devices are equipped with an IO-Link interface as standard for diagnostics and parameterization tasks to ensure optimum adjustment of the sensors to the relevant application. Four different operating modes can be set, among other features:

#### Background suppression operating mode (one switch point):

• Detection of objects irrespective of type and color in a defined detection range. Objects in the background are suppressed.

active detection range

Background suppression

#### Background evaluation operating mode (one switch point):

• Detection of objects irrespective of type and color against a defined background. Reliable detection of objects at close range (detection range >= 0 mm). The background serves as reference.

active detection range

Background evaluation

### Single point mode operating mode (one switch point):

- · Detection of objects irrespective of type and color in a defined detection range. Objects in the background are suppressed.
- The switch point corresponds exactly to the set point.

active detection range

Background suppression

#### Window mode operating mode (two switch points):

- Detection of objects irrespective of type and color in a defined detection range. Reliable detection when object leaves the detection range.
- · Window mode with two switch points.

active detection range

Foreground suppression

Background suppression

# Center window mode operating mode (one switch point):

• Detection of objects irrespective of type and color in a defined detection range. Sets a defined window around a given object. Objects outside this window are not detected.

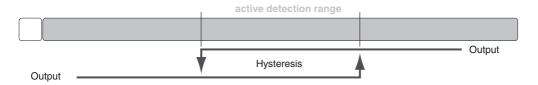

Release date: 2019-06-26 12:58 Date of issue: 2019-10-31 295670-100289\_eng.xml

· Window mode with one switch point.

### Two point mode operating mode (hysteresis operating mode):

• Detection of objects irrespective of type and color between a defined switch-on and switch-off point.

#### Inactive operating mode:

• Evaluation of switching signals is deactivated.

The associated IODD device description file can be found in the download area at www.pepperl-fuchs.com.
