Product information

With the MLV41-54-G reflex sensor with IO-Link interface for the first time a universal communication is available for diagnosis and parameterization through to the sensor level. This provides particular advantages in the service area (fault elimination, maintenance and device replacement), during commissioning (cloning, identification, configuration and localization) and during operation (job changeover, continuous parameter monitoring and online diagnosis).

IO link function

The IO link operating mode is indicated by the green LED indicator with a short interruption ($f = 1 \text{ Hz}$). IO link communication simultaneously provides process data (measurement data from the sensor) and access to requirement data. The requirement data contains the following information:

Identification:

- Manufacturer information
- Product ID
- User-specific ID

Device parameters:

- Teach-in parameters
- Operating parameters
- Configuration parameters
- Device commands

Diagnostic messages and warnings
