1 Functions and features

The unit detects the system temperature in machines and installations.

2 Function

The unit switches the two complementary outputs OUT1 / OUT2:

- With rising temperature OUT1 closes and OUT2 opens when the set value [SET] is reached.
- With falling temperature OUT1 opens and OUT2 closes, when the set value [RESET] is reached.
- Measuring range: -25...140°C / -13...284°F.
- Measuring element: Pt1000 according to DIN EN 60751, class B.

3 Installation

 Before mounting and removing the unit: ensure that no medium can leak at the process connection.

- Insert the unit in a 1/4“ NPT process connection.
- Tighten firmly. Tightening torque: max. 25 Nm.

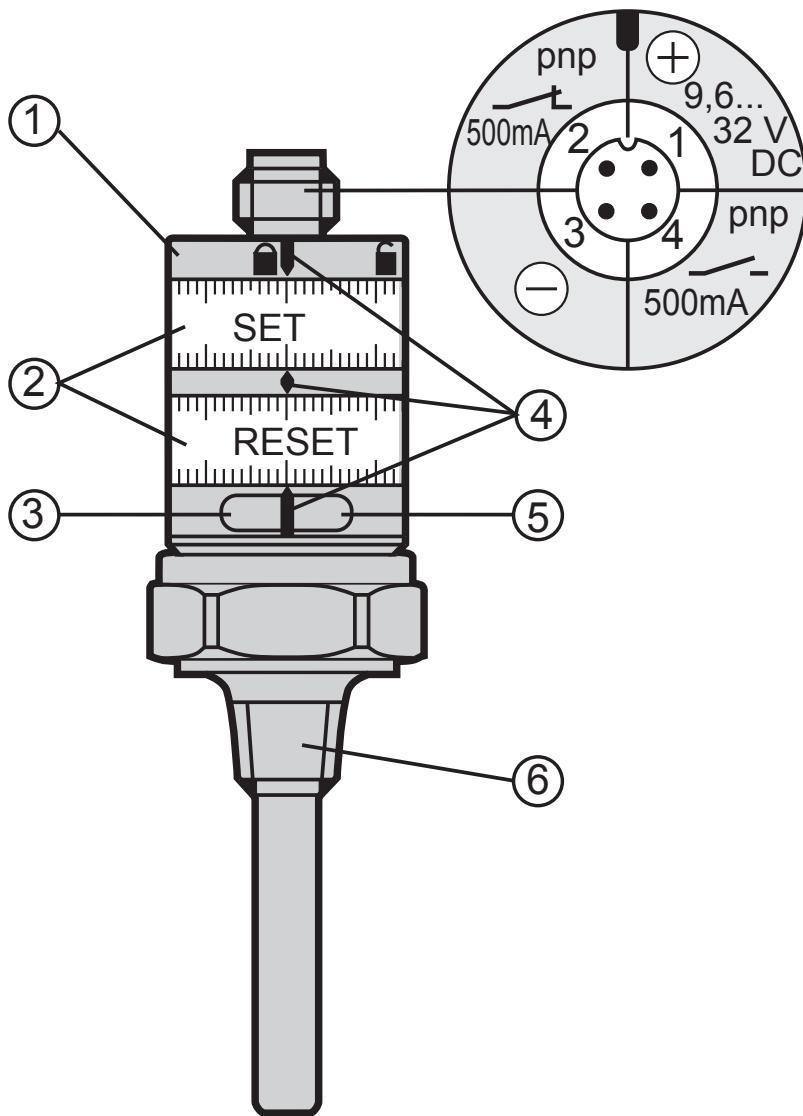

4 Electrical connection

 The unit must be connected by a qualified electrician.

The national and international regulations for the installation of electrical equipment must be adhered to.

- Disconnect power.
- Connect the unit as indicated on the type label.

5 Setting

1: locking ring

2: setting rings (manually adjustable after unlocking)

3: LED green: supply voltage O.K.

4: setting marks

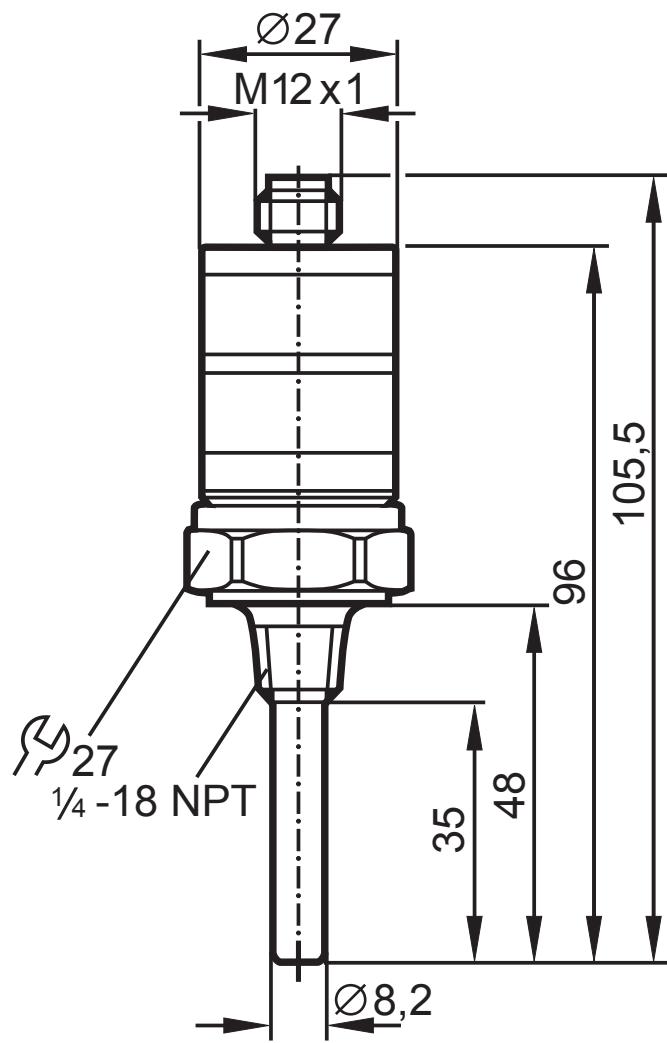

5: LED yellow: value [SET] reached, OUT1 = ON / OUT2 = OFF]

6: process connection 1/4" NPT

pin 4 = OUT1 / pin 2 = OUT2

- Minimum distance between [SET] and [RESET] = 3 K.
- To obtain the setting accuracy: Set both rings to the minimum value, then set the requested values.

6 Scale drawing

Dimensions are in millimeters
